

Rapid Tests

Welcome

Dear reader,

we are very pleased to announce the arrival of our new rapid tests catalog, that was updated with our latest products.

All of our tests can be found listed by parameters in the first part of the catalog. So you can directly find the correct test for your needs. In the second part of the catalog we have compiled additional details for each individual test and equipment for you.

We are a successful manufacturer of water analysis- and rapid tests for more than 60 years. A continuous development has always been important to us to meet your today's and future needs.

If you have further questions or need additional advice, you can contact us at any time. Our friendly team of experts in Dueren and our competent sales team are very happy to be at your service.

Technical Support and Customer Service

Telephone: +49 24 21 969-332

E-mail: csc@mn-net.com

Enjoy our new catalog; we are pleased to listen to your feedback!

Your Water Analysis team

Timeline MACHEREY-NAGEL

MACHEREY-NAGEL

MACHEREY-NAGEL was founded in 1911 in Dueren (Germany) as a manufacturer of special filter papers. Since then we have established ourselves as one of the world's leading companies in the field of chemical and biomolecular analysis. In addition to our product lines for rapid tests and water analysis we offer a wide selection of products for filtration, chromatography and bioanalysis.

We are able to look back on decades of experience in the field of rapid tests and water analysis. In the 1950s we launched the first generation of rapid tests, in 1976 our first photometer. Over the years we have steadily refined and improved our products. This makes us one of the leading and most reliable manufacturers for water analysis.

Our headquarters are located in Dueren. Our commercial and administrative areas, research and development departments as well as our productions are based there. In addition we run three branches in Switzerland, France and the USA with more than 600 employees. Furthermore, a globally operating network of qualified and specially trained distributors in more than 150 countries, ensure worldwide availability of MN products and services.

As a privately owned company, the term family is of highest importance to us. We understand all customers as part of the MN family – our philosophy of a successful, trusting, and long term cooperation. This fundamental understanding of customer relationships goes hand in hand with our focus on quality. For more than 100 years, our customers can rely on products "Made in Germany". From conviction, we think and act in the long term.

Our personal service offers wealth of expertise and friendly advise, which creates an additional value for our customers. From the initial contact throughout the entire life-time of our products, our employees are available for customers and offer advise and support.

MACHEREY-NAGEL offers a unique combination of expertise and partnership, which makes cooperation for you very successful and pleasant.

Measuring ranges

0.001 mg/L

0.01 mg/L

0.1 mg/L

1 mg/L

VISOCOLOR® alpha

includes colorimetric and titrimetric tests. These are evaluated visually by comparison with a color scale or drop counting. Through the use of mixed reagents often only one reagent is required.

VISOCOLOR® ECO

are colorimetric and titrimetric tests that are evaluated by comparison with a color scale or drop counting. Single reagents enable accurate analysis of water ingredients.

VISOCOLOR® HE

are highly sensitive colorimetric and titrimetric tests. Their sensitivity is achieved by using longer measurement tubes and highly sensitive reagents.

VISOCOLOR® Powder Pillows

Are individually packaged reagents which contain the exactly needed amount for a determination. They enable easiest dosing of reagents.

NANOCOLOR® standard tests

are evaluated in cells with up to 50 mm layer thickness. Thereby highest accuracy and precision can be reached. An extremely broad measuring range can be covered.

10 mg/L

100 mg/L

1000 mg/L

10000 mg/L

Qualitative test papers

serve to check the presence or absence of chemical compounds. A change in color indicates that the concentration of the tested substance is above the detection limit.

QUANTOFIX® tests trips

enable semi-quantitative determinations of a variety of parameters. They can be used immediately. No additional accessories are required.

NANOCOLOR® tube tests

contain already pre-dosed reagents, whereby a high safety and measurement accuracy is achieved. The measurement is carried out by photometry in a test tube.

NANOCOLOR® ECO reagent kits

contain all reagents needed for the test performance and evaluation in round test tubes. They can also be transferred to 50 mm cells to achieve lower detection limits.

NANOCOLOR® photometers

Water analysis made easy

NANOCOLOR® photometers by MACHEREY-NAGEL are universally applicable in all areas of water and waste water analysis. In addition to the analysis of urban and industrial waste water, drinking water, process water, surface water, ground water as well as cooling and boiler feed water, NANOCOLOR® photometers can also be used for quality control in various industries such as food and beverage industry. The complete analysis can be performed reliably and quickly with just one device. In addition to the standard methods, NANOCOLOR® photometers can also be used for special applications such as color measurements.

Overview

Photometer	REF	Type	Wavelengths	Wavelength accuracy	Spectral bandwidth	Operation	Display	Data memory ¹⁾	Platform ²⁾
■ NANOCOLOR® VIS II	919650	Spectro-photometer	320–1100 nm	± 1 nm	< 4 nm	Touch screen	HD LCD	5000	TT, ST, RK, PP

NANOCOLOR® heating blocks

Reliable sample digestion for photometric analysis

An important step in the sample preparation for photometric water analysis is the thermal decomposition of the water sample. The heating blocks *NANOCOLOR® VARIO 4* and *NANOCOLOR® VARIO C2* allow a fast and safe performance of all required sample digestions in the water and wastewater analysis.

Within of metal analysis, the *NANOCOLOR® VARIO C2 M* can be used for the digestion of larger sample volumes. This heating block has two 22 mm and eight 16 mm bores for the digestion of large sample volumes.

The *NANOCOLOR® VARIO HC* has an integrated active cooling which enables an extremely short cooling time. Thereby, an even faster digestion is possible which means a significant time saving.

The *NANOCOLOR® VARIO Mini* is a compact heating block, which is suitable for mobile analytics due to its size.

Overview

Heating block	REF	Parallel digestions	Heating units	Bores 16 mm	Bores 22 mm	Warm-up time (25 °C → 160 °C)	Temperature range	Operation

Analytical quality assurance

IQC (Internal quality control)

Operating methods have become an approved way of system control and monitoring. The fundamental advantage is the rapid information compared to the instrumentally complex and time consuming standard methods. Further benefits are the lower demand of reagents, lower costs as well as a rapid performance of the test. The use of operating methods can reduce the amount of reference methods significantly.

Internal quality control serves for the verification of the whole analytical system. This accounts for the reagents and test kits, the devices which are used for analysis as well as for the personal performance. IQC is important in order to ensure correct results and to fulfill validation requirements. Several measures can be used for internal quality control and are described on the following pages.

IQC

Multiple determinations

With multiple determinations the precision of a measurement can be checked. Outliers are detected immediately and tendencies or scatters become visible.

Products for quality assurance

Applicable for all NANOCOLOR® tests

IQC

Standard measurements

By regular standard measurements, the way you work and the overall analysis system can be checked. In this case, a standard solution with a known concentration of a parameter is investigated.

Products for quality assurance

NANOCONTROL single and multi standards

IQC

Plausibility checks by dilution and standard addition

Dilutions and standard additions are suitable procedures to safeguard measurement values. These methods are employed when there are doubts about the accuracy of results.

Products for quality assurance

NANOCONTROL standard addition

IQC

Parallel measurements

In parallel measurements a sample is measured simultaneously with internal operational analysis and in an external independent laboratory. This results in a direct comparison. The measurement results should thereby be safeguarded by multiple determinations.

Products for quality assurance

Applicable for all NANOCOLOR® tests

IQC

Inspection equipment monitoring (photometer / heating blocks)

In the inspection equipment monitoring all devices which are used in the operational analysis, are monitored and tested (e.g. photometers, heating blocks and pipettes). This is done by appropriate means for operability.

Products for quality assurance

NANOCONTROL NANOCHECK 2.0

NANOCONTROL NANOTURB

NANOCOLOR® T-Set and USB T-Set

IQC

Personal information sheet / training

The education and training of laboratory staff has become a high priority within internal quality control. The focus of training is the understanding of analytical correlations, and the detection of possible error sources.

Products for quality assurance

MN seminars (for free)

Platforms

pH

Products for pH determination

For pH determination mainly test papers and test strips are used. By simply dipping the test strip into a solution, the pH value can be determined safely. The use of different indicators causes a color reaction on the test strip. In most cases the evaluation is carried out by a comparison with a color scale.

QT

Qualitative test papers

Qualitative test papers provide information on whether a particular substance is present or not. By immersing the test paper into the sample solution a color change occurs when the concentration of the investigated substance is above a specific detection limit.

HT

Semi-quantitative tests strips

Test papers and test strips for semi-quantitative analysis are extremely simple to handle. They are based on the principle of "dip and read". They are available for a variety of parameters and comply with all requirements of a modern rapid test. The evaluation of these tests is carried out by a comparison with a color scale.

CO

Colorimetric test kits

Colorimetric tests are based on a color development of the sample after the addition of reagents. The evaluation of these tests is carried out by a comparison with a color chart.

TI

Titrimetric test kits

Titrimetric tests are based on the principle of the addition of reagent until a color change occurs. For the evaluation of these tests no separate color card is required. The amount of consumed reagent is directly related to the measured value.

PP

Powder Pillows

Powder Pillows are individually packaged reagents and contain the exactly needed amount for a determination. The evaluation of these tests is carried out photometrically in 16 or 24 mm test tubes.

TT

NANOCOLOR® tube tests

Tube tests are photometric rapid tests with pre-dosed reagents. The evaluation of these tests is carried out photometrically in 16 mm test tubes.

ST

NANOCOLOR® standard tests

Standard tests are photometric reagent sets. They contain all the reagents necessary for the analysis. Evaluation is carried out photometrically in precision cells with up to 50 mm layer thickness.

MB

Microbiological tests

Microbiological tests are based on enzymatic reaction or metabolic processes of bacteria. The evaluation of these tests is carried out with an oxygen probe or with the help of a luminometer.

RK

NANOCOLOR® ECO reagent kits

NANOCOLOR® ECO reagent kits are photometric reagent sets containing all reagents necessary for the analysis. The tests are performed and evaluated directly in 16 mm or 24 mm test tubes. They can also be evaluated in 50 mm semi micro cells.

Parameters A-Z

Parameters A–Z

Acetic acid (CH₃COOH)

See Organic acids (page 40)

Acid binding capacity

See Alkalinity (page 23)

Acid capacity

See Alkalinity (page 23)

Acidity

Acidity is a measure for the amount of acid in water. It gives the amount of NaOH that needs to be added to cause a color change of the pH indicator phenolphthalein (pH = 8.2).

Product	Platform	Measuring range	Number of tests	REF
■ VISOCOLOR® HE Acidity AC 7	TI	0.2–7.2 mmol/L H ⁺	200	915006

Active oxygen

“Active oxygen” and potassium monopersulfate (KMPS), respectively, is widely used as a green alternative to chlorine in the disinfection of swimming pools.

Product	Platform	Measuring range	Number of tests	REF
■ QUANTOFIX® Active oxygen	HT	0 · 4 · 8 · 15 · 25 mg/L KMPS	100	91349

Air humidity (relative)

Products that are sensitive to moisture must be kept dry. To achieve this, such products are often packed in PE bags with a desiccant. Moisture indicators allow a simple, visual control whether the product is still kept dry. Conventional moisture indicators are based on cobalt chloride, which is classified as toxic and carcinogenic. The cobalt chloride-free moisture indicators do not contain toxic or carcinogenic substances.

Product	Platform	Measuring range	Number of tests	REF
■ Moisture indicator	HT	20 · 30 · 40 · 50 · 60 · 70 · 80 % relative humidity	12	90801
■ Moisture indicator	QT	> 8 % relative humidity	1000	908805
■ Non-toxic moisture indicator without cobalt chloride	QT	> 8 % relative humidity	1000	908808

Alcohol

See Ethanol (page 32) and Methanol (page 37)

Alkalinity

Alkalinity is a measure for the buffer capacity of natural waters. It gives the amount of acid that needs to be added to cause a color change of the indicator methylorange (*m*-value, pH 4.3) or phenolphthalein (*p*-value, pH 8.2). Alkalinity is mainly caused by a combination of carbonate, bicarbonate, and hydroxide ions. If the alkalinity is high, the addition of acids or bases has only a little influence on the pH.

Alkalinity inhibits corrosion in boiler and cooling water. Additionally, alkalinity is an important parameter for quality control in process water, aquariums, and swimming pools.

Product	Platform	Measuring range	Number of tests	REF
■ QUANTOFIX® Carbonate hardness	HT	0 · 3.8 · 7.5 · 12.5 · 18.8 · 25.0 °e	100	91323

²⁾ Only photometrically evaluable, with photometers PF-3/PF-12^{Plus} and/or NANOCOLOR® Advance.

Aluminum (Al³⁺)

Water-treatment plants use aluminum potassium sulfate (Alum) in order to flocculate suspended solids. The level of aluminum in finally treated drinking water may increase because of this process and therefore has to be tested. Depending on national regulations, different aluminum concentrations are tolerated in industrial effluents. In natural waters, the concentration of aluminum compounds is usually low.

Product	Platform	Measuring range	Number of tests	REF
■ Aluminum test paper	QT	> 10 mg/L Al ³⁺	100	90721

■ NANOCOLOR® Aluminum	ST	0.01–1.00 mg/L Al ³⁺	250	91802

Parameters A–Z

Ammonia (NH₄⁺)

In surface and ground waters, ammonium ions are an indication for the decomposition of animal or vegetable matter. High ammonia concentrations in surface waters can indicate contamination from waste water treatment plants, fertilizer runoff, or industrial effluents. Excess ammonia levels are toxic to aquatic life.

Product	Platform	Measuring range	Number of tests	REF
Ammonium test paper	QT	> 10 mg/L NH ₄ ⁺	200	90722
Ammonia test	HT	0 · 0.5 · 1 · 3 · 6 mg/L NH ₄ ⁺	25	90714
QUANTOFIX® Ammonium ³⁾	HT	0 · 10 · 25 · 50 · 100 · 200 · 400 mg/L NH ₄ ⁺	100	91315

Arsenic (As^{3+/5+})

As a naturally occurring element, arsenic is widely distributed in the earth's crust. Organic arsenic compounds can be used as pesticides.

Arsenic is toxic and causes skin diseases, keratosis, and melanoma. Therefore, arsenic levels have to be monitored regularly in drinking water. The WHO recommends a limit for drinking water of 0.01 mg/L arsenic.

Parameters A–Z

Chlorine (Cl₂)

Chlorine is widely used for disinfection of swimming pools, water mains, and water reservoirs. Electroplaters use chlorine for the detoxification of cyanide-containing waste. Regular monitoring of chlorine level is essential as excessive chlorine not only impairs the smell and taste of water but also can be hazardous. One distinguishes between free chlorine and combined chlorine (chloroamines); the sum of both is called total chlorine.

Parameters A–Z

Hardness

Water hardness is primarily caused by calcium and magnesium. It forms deposits in pipes and on heating elements and can lead to damages. Testing water hardness is important to dose water softeners correctly. Very low residual hardness is required in industrial boiler feed water.

Water is often classified as “soft” or “hard”. The following ranges apply in European households:

< 150 ppm (10.5 °e) = soft water

150–250 ppm (10.5 to 17.5 °e) = moderately hard water

> 250 ppm (17 °e) = hard water

Product	Platform	Measuring range	Number of tests	REF

Parameters A-Z

Nitrate (NO₃⁻)

Nitrate is a by-product of biological decay from plant and animal matter (nitrification). Nitrate is reduced to nitrite easily, which can lead to diseases and increased fish mortality. Furthermore, high concentrations of nitrate itself are also harmful. Such concentrations are found predominantly in agricultural areas where nitrogen fertilizer is regularly used. The EU's limit for nitrate in drinking water is 50 mg/L. Nitrate is also an important parameter in the outflow of wastewater treatment plants.

Nitrite (NO₂⁻)

Nitrite is produced as an intermediate in the nitrification in sewage treatment plants. An excessive content of nitrite indicates that the plant's biology does not work optimally. A high level of nitrite in cooling lubricants indicates a microbiological contamination of the circuit (see also cooling lubricants page 30). Nitrite has to be controlled in aquariums as well in order to ensure optimum living conditions for the aquatic life.

■ NANOCOLOR® Oxygen 12	TT	0.5–12.0 mg/L O ₂	22	985082

¹⁾ Also suitable for photometrical evaluation on photometers PF-3, PF-12^{Plus} and / or NANOCOLOR® Advance. Measuring range can differ in photometrical evaluation.

Ozone (O₃)

Ozone, a potent disinfectant, is widely used for the sterilization and purification of water in swimming baths, breweries, pharmaceutical industries, and mineral water factories. The gas is toxic to humans and is also produced in the environment from oxygen and nitrogen oxide under the influence of sunlight. When ozone concentrations in air are higher than 180 µg/m³ sensitive persons should avoid physical exertion outdoors.

Product	Platform	Measuring range	Number of tests	REF
■ Potassium iodide starch paper	QT	Qualitative	Reel, 5 m length refill pack 100200	90754 90755 90756 90758

Peroxide (H₂O₂)

Hydrogen peroxide is a disinfectant. It is used in the dairy and beverage industry for disinfection of packaging. Prior to the disinfection, the check for a sufficiently high concentration of peroxide is mandatory. After the disinfection, the complete removal of peroxides has to be controlled.

Some solvents, which are used in the chemical industry, tend to form peroxides. The check for peroxides in such solvents is of importance to avoid explosions during heating.

Product	Platform	Measuring range	Number of tests	REF
■ QUANTOFIX® Peroxide 1000 ³⁾	HT	0 · 50 · 150 · 300 · 500 · 800 · 1000 mg/L H ₂ O ₂	100	91333

Parameters A–Z

Phosphatase

The determination of alkaline phosphatase in milk allows a quick and easy quality control of pasteurization (Phosphatesmo MI).

The test for acid phosphatase (Phosphatesmo KM) enables a quick and simple check for sperm in stains. However, this test does not replace the detection of intact sperm.

Product	Platform	Measuring range	Number of tests	REF
■ Phosphatesmo KM (for criminalistics)	QT	Traces of sperm	25	90607
■ Phosphatesmo MI (for dairy industry)	QT	> 0.5 % raw milk in pasteurized milk or > 300 U/L alkaline phosphatase in UHT milk	50	90612

Phosphate (phosphorous, PO₄³⁻)

High levels of phosphate in surface water are an indication of domestic sewage, fertilizer or industrial wastewater. Very high levels lead to eutrophication (over-fertilization) of rivers and lakes and can ultimately lead to the death of fish and plants. The elimination of phosphorus from wastewater is therefore an important target of cleaning in sewage treatment plants.

Parameters A–Z

TSS (Total Suspended Solids)

The photometric determination of total suspended solids provides a quick and easy method that does not require any filtration nor any heating or gravimetric processes. The USEPA, Standard Methods and DIN EN norms (DIN EN 872) specify the filtration/gravimetric method to determine total suspended solids. Therefore, the photometric method is especially used during in-process analysis.

Product	Platform	Measuring range	Number of tests	REF
■ TSS	TT	30 – 750 mg/L at 860 nm with Spectrophotometer 70 – 750 mg/L at 690 nm with <i>NANOCOLOR</i> ® 500 D, 400 D, 350 D and PF-12	–	–

TTC / Sludge activity

See Sludge activity / TTC (page 45)

Turbidity

Turbidity is caused by small non-dissolved particles. These particles cause absorption, scattering and reflection of incident light. Turbidity is a frequently underestimated source of error in photometry. It affects the reading and is often visually not easy to recognize. Even a slight turbidity, imperceptible to the human eye, can extremely falsify analytical results. The turbidity measurements are carried out in the photometer with preprogrammed special methods. No separate test kits are needed for these measurements.

Product	Platform	Measuring range	Number of tests	REF

---------------------------------------	----

Unmatched pH test strips

For many years untrained users as well as analytical professionals appreciate the experience of easy pH testing with pH-Fix. In contrast to common indicator papers, the indicator dyes in pH-Fix test strips are chemically bound to the test pads. This patented technology prevents bleeding of the dyes and therefore a contamination of the sample, even in highly alkaline solutions. The fixation enables the strips to remain in solution over extended periods of time allowing a safe pH determination even in weakly buffered solutions.

Good to know

Many customers receive our pH-Fix test strips as an OEM product.

How it's done

Using pH-Fix test strips

Optimized packages

In the classic packaging, the smart corner of the box safely prevents jamming of test strips. By simply tilting the box the strips fall easily into the smart corner allowing the closing with maximal comfort.

How it's done

The smart corner

Especially users in the medical sector appreciate the robust PlopTop tube. The tube is higher than the length of the strips and can be easily opened and closed with the thumb of the holding hand. There is no risk of jamming the strip. The tube is virtually unbreakable and stands firmly on any flat surface.

CE-mark for medical applications

Some pH-Fix test strips are tested and approved for medical applications and carry a CE-mark for in-vitro-diagnostics 98/78/EG (for details see table on page 54). They meet the special demands of health care professionals and ensure safe results for medical pH testing.

Automatic evaluation with the QUANTOFIX® Relax

The strip reader QUANTOFIX® Relax (see page 154) allows the easy and reliable documentation of pH testing. The system provides objective and quantitative results. It allows printing and storing of test data including time and sample ID. Test strips covering the complete pH range can be evaluated using the QUANTOFIX® Relax (for details see table on page 54).

Rapid

- Dip & Read
- Results in seconds
- Always ready for use

Easy

- No calibration
- No maintenance
- No accessories

Reliable

- Long handle for sufficient hand-sample-distance
- Brilliant color chart for precise readings
- Automatic evaluation with QUANTOFIX® Relax for safe documentation

Good to know

Many pH-Fix test strips can be also evaluated on the strip reader QUANTOFIX® Relax (see page 154).

QUANTOFIX® Relax

Reflectometer for evaluation of test strips

Perfect optic – Exact results

- Intuitive operation
- Highest precision
- Reproducible results independently from the user
- Printout of the results for optimal documentation

PEHANON®

pH determination in colored samples

PEHANON® test strips unify pH indicator and reference color chart on one strip. Any sample color has the same effect on both, the reference colors and the reactive pad, allowing unadulterated pH reading even in colored solutions.

Safe testing of hazardous samples

An invisible hydrophobic barrier just above the top color field prevents migration of the sample. The handle remains dry and clean and the user is safely protected from contamination due to capillary rise.

No separate color chart needed

PEHANON® test strips can be read without a separate color chart. Workers in production can use single strips instead of complete packs making the product very economical.

Universal- and indicator papers

pH indicator papers - standard for many applications

pH indicator papers have been available for decades and are the standard for many applications. For each pH value these papers show a single color which can be matched with the color scale at intervals of 0.2–1 pH units. The indicator papers come in plastic reels that ensure long-term stability and protection against many external influences. They will be always ready-to-use when needed.

MACHEREY-NAGEL also controls the production of the raw papers which ensures – in combination with our ISO 9001 QC system – the high quality of the indicator papers.

The colors of the scales are specially mixed to perfectly match the reaction color of the indicator papers. This makes the reading of results easy and accurate.

Good to know

We produce pH indicator booklets for pharmaceutical industries with a CE-marking for urine diagnostics.

Duotest and Tritest

pH papers with multiple indicator zones

By the combination of several indicators on one test paper, a better recognition between different pH values is achieved. This makes the correct pH reading easier.

Duotest – two indicator zones for higher accuracy

Duotest indicator papers combine two different indicator zones on a single strip. The zones are separated by a hydrophobic barrier, which effectively prevents mixing of the reaction colors and increases the mechanical stability.

Tritest – three indicator zones for highest precision

Tritest indicator paper has three different indicator zones on a single paper. The three zones guarantee optimal color differences and safe determination of in-between values. Tritest indicator paper is available for a pH range from 1–11 and feature 1 pH unit increments.

In Tritest L indicator paper, two hydrophobic barriers separate the indicator zones. Even in strongly alkaline solutions, the colors of the zones do not mix.

pH papers without color chart and indicator solutions

For some specific analytical questions, qualitative pH papers or indicator solutions are used.

Simplest acid/base determination

Qualitative pH papers without color chart are simple, completely impregnated indicator papers. They indicate if the pH of a solution is above or below the transition point (color change) and are useful to distinguish between acids and bases.

pH determinations in weakly buffered solutions

UNISOL indicator solutions are used for pH determination in pure water, in surface waters and in very dilute acids or bases. An indicator solution is added to the sample and the reaction color is compared with a color scale. Therefore, they allow the easy and reliable pH determination in weakly buffered solutions.

Semi-quantitative test strips

QUANTOFIX® test strips meet all requirements of a modern rapid test. The color of the reactive pad changes depending on the concentration of an analyte in the sample. The evaluation is usually carried out visually by a comparison of the reaction color with a multi-stage color scale.

Easy analysis directly at the point of interest

Analytical professionals as well as occasional testers appreciate QUANTOFIX® test strips for the fast and easy analysis directly at the point of interest. Often, these tests are used to quickly check whether important parameters are in the desired range. They deliver an immediate result and thus enable a fast response.

Complete mini-lab

QUANTOFIX® tests are immediately ready-to-use. They do not require additional accessories. The test strips are intended for single use, maintenance or calibration are not required.

Quantitative, documented results with QUANTOFIX® Relax

The strip reader QUANTOFIX® Relax (see page 154) provides objective and quantitative results for many important parameters (see page 62). Measurement data including time, date and sample ID are printed, stored and can be transmitted to an information system. This allows the rapid and reliable documentation of test results, which proved to be especially useful for QC departments.

Good to know

Many customers receive our QUANTOFIX® test strips as OEM product.

How it's done

Application of QUANTOFIX® test strips

Rapid

- Just Dip & Read
- Results within seconds
- Always ready for use

Easy

- No calibration
- No maintenance
- No accessories

Reliable

- Desiccant in the stopper for optimal protection of the strips against humidity
- Color chart confirmed with traceable standards
- Automatic evaluation with QUANTOFIX® Relax for safe documentation

Good to know

Many QUANTOFIX® test strips can be also evaluated on the strip reader QUANTOFIX® Relax (see page 154).

AQUADUR® and other test strips

Tests for special applications

A range of tests was developed for specific applications and questions. They provide solutions for particular requirements.

AQUADUR® – easy determination of water hardness

AQUADUR® test strips are made for the easy determination of water hardness allowing to optimize the dosing of water softeners.

AQUADUR® Sensitive – highly sensitive determination of water hardness

Feed water for reversed osmosis units needs to have a very low water hardness. AQUADUR® Sensitive is used, for example, in dialysis practices to test the quality of the water after the first softening.

Moisture indicators without cobalt chloride

Commonly used moisture indicators often contain cobalt chloride which has been found to be carcinogenic and toxic. Contact to these types of indicators may present a health and safety risk to staff. The patented non-toxic moisture indicators eliminate these risks and increase safety. They have a very clear color change from red to yellow.

Good to know

< 50 ppm CaCO₃ – very soft water
50–120 ppm CaCO₃ – soft water
120–240 ppm CaCO₃ – medium hard water
240–360 ppm CaCO₃ – hard water
Above 360 ppm CaCO₃ – very hard water

Test papers without color chart

Simple test papers for qualitative determinations

These test papers come without a color scale. With little effort, the presence of ions and other substances can be detected. The test papers change color when the concentration is above the specified limit of detection.

Test papers for criminal investigations

Peroxtesmo KM is sensitive to peroxidase and detects blood traces.

Sperm traces can be detected using Phosphatesmo KM which is specific for acidic phosphatase. Both test papers are used in the investigation of crime scenes.

Test papers for milk analysis

The test paper Peroxtesmo MI allows the easy distinction between raw milk and high temperature milk. It is sensitive for the enzyme lactoperoxidase. In contrast to liquid indicators based on guaiacol, Peroxtesmo MI does not smell and comes without hazardous reagents which is convenient and safe for the user.

Phosphatesmo MI detects alkaline phosphatase in milk and is a rapid and easy indicator for the successful pasteurization of milk.

Test papers for oil and oil tanks

Oil test paper is recommended for the rapid determination of oil contaminations in water and soil. On contact with oil the paper turns dark blue.

AQUATEC allows the easy and reliable detection of water at the bottom of petrol and fuel oil tanks. It is also suitable to measure the thickness of water layers in oil separators.

Colorimetric and titrimetric test kits

VISOCOLOR® alpha is the most simple version of colorimetric and titrimetric test kits. These tests are suitable for visual evaluation only and are very convenient in performance, because of the used multicomponent reagents. Therefore, the test kits are limited in precision and accuracy but represent an inexpensive method for screening tests of non-turbid and uncolored water samples. The reagent bottles are packed in practical blister packs. The color comparison chart for colorimetric evaluations, as well as the test instructions, are provided on the cardboard back, which is also used for opening and closing of the package.

Colorimetric and titrimetric test kits

VISOCOLOR® ECO presents a product group of colorimetric and titrimetric test kits, which allow even the determination of low limiting values with sufficient accuracy. The high sensitivity and accuracy is accomplished by single reagents which can be dosed precisely and by the possibility to compensate turbidity and color of water samples.

The results are evaluated visually with high-quality color comparison cards, which are adjusted to the original colors of standard solutions. In addition, there is the possibility to evaluate most VISOCOLOR® ECO tests also photometrically with the compact photometers PF-3 (see page 134) and PF-12^{Plus} (see page 132) and spectrophotometer NANOCOLOR® Advance (see page 128). This enables a quantitative evaluation of the test kit.

Budget-priced refill packs are available for photometric evaluation as well as for replacement of consumed chemicals.

All VISOCOLOR® ECO test kits are delivered in a practical cardboard box with plastic inlay and easy to understand instruction manual. In addition, pictogram instructions are available for every test kit on the MACHEREY-NAGEL website.

¹⁾ Please see the instruction leaflet.

²⁾ For evaluation with the PF-12 / PF-12^{Plus}, a special filter (450 nm) is required.

³⁾ Additionally required with first order: Oxygen sample bottle, REF 915498.

⁴⁾ Measuring range for photometric evaluation with the PF-12^{Plus}. Range on other photometers can be different.

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

refill: Refill pack, sufficient for photometric determination.

Easy

- Chemical analysis without further accessories
- No extensive training necessary
- Color-coded reagents with clear dosing instructions

Safe

- Pictogram test instructions
- Reaction basis according to international standards
- Compensation of turbidity and color

Unique

- High quality test kits
- Business-prized refill packs
- Ecologically friendly disposal of used reagents

Colorimetric and titrimetric test kits

VISOCOLOR® HE test kits are highly sensitive colorimetric and titrimetric tests to determine even the lowest limiting values.

The exact dosing of the single reagents as well as the compensation of turbidity and color are the basis for a highly precise analysis. Maximum sensitivity and accuracy are achieved by the use of longer measuring tubes and larger sample volumes. The sensitivity of VISOCOLOR® HE is 10 to 100 times higher compared to other VISOCOLOR® tests.

The visual evaluation of the colorimetric test kits is done with high-quality color comparison disks, which are adjusted to the original color of standard solutions.

Refill packs are available as replacement for consumed reagents. Every VISOCOLOR® HE test kit is delivered in a robust box with plastic inlay and an easy to understand instruction leaflet.

Good to know

VISOCOLOR® HE test kits reach the highest sensitivity and accuracy in visual analytics.

VISOCOLOR® Powder Pillows

Photometric reagent Powder Pillows

VISOCOLOR® Powder Pillows are photometric tests that combine easiest dosing of reagents with photometric precision. Each VISOCOLOR® powder pillow contains the exact amount of reagents needed for a determination. The individually packaged portions not only stand out due to their very long shelf life, but also avoid the use of hazardous substances wherever possible. Easy to understand test instructions with pictograms in 6 languages are available on MACHEREY-NAGEL homepage. VISOCOLOR® Powder Pillows can be evaluated on compact photometers PF-12^{Plus} (see page 132), PF-3 (see page 134) and spectrophotometers NANOCOLOR® Advance (see page 128) NANOCOLOR® VIS II and NANOCOLOR® UV/VIS II (see page 124).

Good to know

Most VISOCOLOR® Powder Pillows for chlorine and silica can be directly used in competitor's photometers. They are ready to use with pre-programmed methods and equipment, no further calibration is needed.

¹⁾ Measuring range for photometric evaluation on NANOCOLOR® VIS II. Range on other photometers can be different.

²⁾ For evaluation with the PF-12^{Plus}, a special filter (450 nm) is required.

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

Easy

- Dosing without spoon or pipette
- Pictogram instructions for each test
- No zero measurement required

Safe

- Photometric precision for best results
- Reaction basis according to international standards
- Extremely long shelf life

Unique

- Optimal price / performance-ratio
- Works on competitor's photometers
- Ecologically friendly disposal of used reagents

VISOCOLOR® accessories

The complete analysis from one source

VISOCOLOR® test kits from MACHEREY-NAGEL are ideally suited for the fast and easy water analysis. Besides the test kits, MACHEREY-NAGEL offers a broad range of accessories for VISOCOLOR® tests.

Good to know

VISOCOLOR® Color standards Chlorine (REF 914820) simulate the reaction color of DPD-based VISOCOLOR® chlorine tests for simple photometer check.

NANOCOLOR® tube tests

Precise rapid tests for photometric water analysis

NANOCOLOR® tube tests for photometric analysis convince by their easy handling and therefore are the first choice for routine, laboratory and process analysis. A maximum in accuracy and precision is granted for the measurement results due to exactly pre-dosed reagents in 16 mm cuvettes and additional reagents. The tests are preprogrammed in MACHEREY-NAGEL photometers and selected automatically via a barcode on the cuvette. This perfect interaction of instruments and tests lets the user experience a high measurement safety, saving time and working cost-efficiently.

Ideally packed

All NANOCOLOR® tube tests are delivered in stable boxes with color coded labels, giving all relevant information about the test at one glance. The boxes provide a perfect protection from sunlight and convenient withdrawal of test tubes and reagents. LOT-specific information are available by scanning of the 2D barcode on the back of the box. The colored pictograms in the lid, which are of special value for our customers, provide intuitive instructions on the test procedure also for inexperienced users.

The perfect test for every user

The user's choice of the correct test is the first step towards a successful analysis. MACHEREY-NAGEL offers various test kits with different measurement ranges for all typical parameters relevant in water and waste water analysis. It is recommended to choose a test kit, where the expected and measured measurement value is within the 20–80 % range of the measuring range of the used test. Here, the safety of the measurement result is at its optimum. The operator gets reliable results and safety for the reporting of his results to supervisors and towards authorities.

Good to know

Certificate

Certificates of analysis for NANOCOLOR® tube tests can be downloaded fast and convenient via www.mn-net.com/certificate.

Good to know

Via the 2D barcode on the back of the packages, LOT-specific information can be read easily.

Easy

- Colored pictograms as step-by-step instruction
- Big cuvettes for easy pipetting
- Barcoded cuvettes for automatic test selection

Safe

- Convenient withdrawal of tubes from the box
- No contact with chemicals
- Reactions based on internationally accepted standard methods

Reliable

- Precisely pre-dosed reagents
- Adequate test for every application
- Constant high quality from batch to batch

Good to know

For further information on photometers for the evaluation of NANOCOLOR® tube tests see page 12.

ISO conform COD tests

MACHEREY-NAGEL offers a complete analytical system with seven tube tests for an ISO conform COD analysis. The ISO 15705 describes the use of tube tests that are suitable for photometric evaluation and is a standardized and internationally accepted method for sewage and waste water analysis. This norm explicitly suggests to use commercial test kits.

Time-saving and reliable analysis of total nitrogen

The sum-parameter total nitrogen is of high relevance in water and waste water analysis. It gives valuable information about the grade of contaminations with e.g. ammonia, nitrite or nitrate. NANOCOLOR® total nitrogen tests impress with safe and reproducible results as well as fast and easy handling. Precisely pre-dosed reagents allow the performance of the test in only a few steps. A separate cuvette for every sample decomposition saves time and minimizes errors from cross-contaminations.

On other photometers than the NANOCOLOR® VIS II measurement ranges and wavelengths can be different.

¹⁾ A more sensitive measuring range is possible by using semi-micro cuvettes 50 mm (REF 91950).

²⁾ Decomposition only possible in microwave.

³⁾ Special filter can be necessary for filter photometers (Formaldehyde 10: 412 nm, Tin 3: 520 nm).

⁴⁾ Without barcode.

⁵⁾ Please see the instruction leaflet.

⁶⁾ This test can be performed without a NANOCOLOR® reagent set. Determination only with NANOCOLOR® spectrophotometers and the PF-12^{plus}.

⁷⁾ Additionally required with first order: NANOCOLOR® TIC-Ex (REF 916993).

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

On other photometers than the NANOCOLOR® VIS II measurement ranges and wavelengths can be different.

¹⁾ A more sensitive measuring range is possible by using semi-micro cuvettes 50 mm (REF 91950).

²⁾ Decomposition only possible in microwave.

³⁾ Special filter can be necessary for filter photometers (Formaldehyde 10: 412 nm, Tin 3: 520 nm).

⁴⁾ Without barcode.

⁵⁾ Please see the instruction leaflet.

⁶⁾ This test can be performed without a NANOCOLOR® reagent set. Determination only with NANOCOLOR® spectrophotometers and the PF-12²⁾.

⁷⁾ Additionally required with first order: NANOCOLOR® TIC-Ex (REF 916993).

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

NANOCOLOR® robot tests

Fully automated water analysis

The companies MACHEREY-NAGEL and Skalar Analytical BV have collaborated on a robotic analyzer for fully automated water analysis in the laboratory.

The test kit analyzer SP2000^{series} automates all the necessary handling steps of the photometric NANOCOLOR® tube tests such as sample (de)-capping, pipetting, addition of reagents, mixing, heating, cooling and measurement.

The flexibility and versatility of the test kit platform is reflected in the possibility to process 48 to 192 test tubes at once by using different test tube racks. The instrument can be configured for the analysis of one test kit application or for multiple test kit applications per analysis run, such as combinations of COD, total phosphate, total nitrogen and others. The evaluation of the tests is performed on the spectrophotometer NANOCOLOR® VIS II which is integrated on the platform. With the software the user can define if the application should be processed sequential or parallel.

Good to know

If you are interested in automated water analysis, please do not hesitate to contact us.

NANOCOLOR® standard tests

High sensitivity for photometric water analysis

NANOCOLOR® standard tests are convenient reagent kits for photometric analysis. With ready-to-use reagents up to 500 determinations are possible with only one test kit, resulting in low costs per determination for the user. Even very low limits can be evaluated precisely, due to high sample volumes and the measurement in 50 mm cuvettes. An enhancement of selectivity is possible for various parameters by extraction, where potentially interfering substances remain in the aqueous phase. The colored complex with the substance of interest is extracted with an organic solvent from the aqueous phase and is then analyzed within the organic phase.

Good to know

NANOCOLOR® standard tests offer maximum sensitivity and accuracy in photometric analysis.

Good to know

For further information on NANOCOLOR® photometers for the evaluation of NANOCOLOR® standard tests see page 12.

How it's done

Procedure of standard tests

Fill 20 mL sample into 25 mL flask

Add reagents

Fill up to 25 mL with dist. water and mix

After reaction time fill into cuvette

Measure

NANOCOLOR® standard tests

¹⁾ Maximal number of tests. The number of tests depends on the used sample volume.

²⁾ Decomposition in micro wave is possible.

³⁾ Organic phase tetrachloro ethylene p.a. or tetrachloro methane is needed additionally.

⁴⁾ No NANOCOLOR® test is necessary for this determination.

⁵⁾ Highly sensitive measurement.

⁶⁾ Please see the instruction leaflet.

⁷⁾ This test can only be performed with NANOCOLOR® UV/VIS II.

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

Flexible reagent kits for photometric analysis

NANOCOLOR® ECO reagent kits are convenient and flexible test sets for photometric analysis. They impress with their simple test procedure at low determination costs. A set includes all reagents needed for 100 determinations. The tests are performed and measured in 16 mm (REF 91680) or 24 mm (REF 936101) round test tubes without the need of additional beakers or volumetric flasks. The sensitivity can be increased by transferring the solution into a 50 mm semi micro cell (REF 91950). The reagent kits from the NANOCOLOR® ECO line are based on reaction chemistry of recognized standard methods and norms. All together, NANOCOLOR® ECO reagent kits combine convenient test procedures with secure and reliable measuring results.

Good to know

NANOCOLOR® ECO reagent kits include liquid or solid reagents which can be easily dosed with a pipette or tweezers.

How it's done

Procedure of NANOCOLOR® ECO tests

■ Ammonium LR	976003	0.040–1.80 mg/L NH ₄ -N (16 mm) 0.020–1.15 mg/L NH ₄ -N (24 mm) 0.010–0.500 mg/L NH ₄ -N (50 mm)	1.5 years	100	Indophenol – according to APHA 4500-NH ₃ F, ISO 7150-1, DIN 38406-E5 and EPA 350.1

¹⁾ See instruction leaflet

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

Easy

- Pictograms as step-by-step instruction
- Tests are performed directly in 16 mm or 24 mm test tubes
- No complex sample preparation in volumetric flask or beaker

Reliable

- Reaction chemistry based on internationally accepted standard methods
- Constant quality from batch to batch
- Method validation data available for each reagent kit

Flexible

- Measurement in 16 mm or 24 mm round tubes
- Increased sensitivity by transfer into 50 mm semi micro cell
- Convenient test procedure with high sensitivity

With **NANOCONTROL** the user can check the complete **NANOCOLOR®** analytical system and his own work comprehensively and prove the correctness of his results. The performance of consequent analytical quality assurance allows for an objective proof of the accuracy of the photometric analysis resulting in acceptance by local authorities. **MACHEREY-NAGEL** offers a complete system to test and document the performance of the system for internal quality control. Together with our customers we developed a user-friendly system, future-proof, and tailor-made for the needs of the operator. Continuous development and innovation make us the market leader in all questions regarding quality control in photometric water analysis.

In *NANOCONTROL* standards the respective reference substances are dissolved with a defined concentration. This concentration of the standard solution is selected to be in the middle of the measuring range of the suitable test kit with a narrow confidence interval. The standard solution is applied in the test instead of a normal water sample. The test kit is then handled as described in the instructions. When the result of the test is within the confidence interval, the operator can be sure that all components of his analytical system are working correctly and that no handling error was made. In case of deviations from the given value, equipment and test kit have to be monitored and checked. In addition to solutions with only one standard substance also multistandards are available, containing a mixture of different standard substances. They are designed for special fields of application, e.g. waste water or drinking water analysis.

Good to know

All requirements on quality assurance (IQC) can be fulfilled with the **NANOCONTROL** System from **MACHERY-NAGEL**.

Find an overview on page 16.

Spiking solutions

The concentration of a parameter in samples is increased by a defined value by spiking it with a standard addition using *NANOCONTROL* 100+ solutions. Possible interferences in the sample matrix can be detected under consideration of the recovery rates. This kind of plausibility test is especially recommended if an unknown sample has to be analyzed for the first time, or if it is known that the sample contains interfering substances as e.g. large amounts of salt or proteins. In addition to a dilution, this method can give insight to possible sources of error, if there is a continuous deviation from the expected measurement result. *NANOCONTROL* 100+ solutions are available for multi-standards as well as single standards.

How it's done

Procedure for *NANOCONTROL* 100+ addition

Determination of concentration of sample before spiking

Fill 10 mL of
sample into
beaker (or cuvette)

Add 100 μ L 100+
addition solution
and mix

Determination of
new concentration

The difference in concentration should equal the theoretical value of the 100+ addition solution.

NANOCOLOR® reagents for sample decomposition

Sample preparation for photometric analysis

Usually only dissolved compounds of a parameter are detected in water analysis. In strongly contaminated waters and industrial waste water these parameters are often bound in complexes or other structures and are therefore not directly accessible for the respective test. If it is necessary to determine the total amount of these substances, a decomposition step has to be done prior to analysis, where on most cases large amounts of organic material have to be decomposed. Within the NANOCOLOR® system there are various rapid and easy methods available for conventional sample decomposition with solid reagents and kits with liquid reagents for complex matrices. In some of the NANOCOLOR® tube tests the reagents for sample preparation are already included and pre-dosed in additional test tubes next to the cuvettes. This is the perfect combination for the determination of total parameters such as total nitrogen or total chromium. Other reagents for sample preparation are available separately and are suitable for more than one parameter. After digestion the samples are then processed as described in the instructions for the respective NANOCOLOR® test kit.

NANOCOLOR® NanOx N – Oxidative digestion of samples containing nitrogen

NANOCOLOR® NanOx N consists of an easy-to-dose solid oxidation reagent (peroxodisulfate) and a compensation reagent to eliminate interfering substances. After digestion, all inorganic and organic nitrogen compounds in the sample have been converted to nitrate and can be detected. The digestion of larger sample volumes allows a multiple determination from just one preparation.

NANOCOLOR® NanOx Metal – Oxidation of samples containing heavy metals

Undissolved metal ions and metal oxides are dissolved with the aid of acids and heat, metal ions are de-complexated and adsorptive or interfering substances are eliminated. Optimal recovery rates can be found in the analysis of heavy metals. NANOCOLOR® NanOx Metal consists of an easy-to-dose solid oxidation reagent (peroxodisulfate) and a neutralizing reagent to adjust the pH value for the following determination of different metals. In addition to the digestion in the heating block, it is possible to digest samples in less time using a microwave.

Good to know

For further accessories for digestions with NANOCOLOR® NanOx Metal in a heating block or a microwave see page 112.

NANOCOLOR[®] reagents for sample decomposition

NANOCOLOR[®] crack set

For a more powerful and complete digestion of resistant samples we recommend to use the NANOCOLOR[®] crack set. The included liquid reagents allow an oxidative sample preparation under acidic conditions (peroxodisulfate/sulfuric acid) and normal pressure at 100 °C in the heating block.

NANOCOLOR[®] sludge

In Germany, the sewage sludge regulation regularizes the use of sludge as fertilizer in agriculture and in market gardens. Therein a limit for seven heavy metals is established. The determination of these parameters is possible with high accuracy using NANOCOLOR[®] sludge (aqua regia) for digestion. A thorough training is recommended to learn the special working techniques before using the kit. Detailed instructions regarding sludge analysis can be provided free of charge.

How it's done

Decomposition in heating block with NanOx N

Add decomposition reagent

Heat

NANOCOLOR® accessories

Everything from one hand

An indicator for the quality of an analytical system is its completeness. Therefore, accessories for sample drawing, preparation, and conservation as well as for decomposition, extraction and filtration are part of the NANOCOLOR® system.

Getting all these components from one hand allows a smooth work flow leading to optimal results.

■ Volumetric flask 10 mL for reduced analytical preparations	91642	2 pieces			
■ Volumetric flask 25 mL with NS 10/19 and PE stopper for analytical preparations	91661	2 pieces			
■ Volumetric flask 100 mL with NS 12/21 and PE stopper	91683	2 pieces			
■ Erlenmeyer flask 50 mL	916212	1 piece			
■ Erlenmeyer flask 100 mL	91638	1 piece			
■ Measuring cylinder 50 mL	91684	1 piece			
■ Bulb for filling 20 mL pipettes	91665	1 piece			
■ Glass rod 30 cm	91639	1 piece			
■ Tweezers for picking of NANOFIX capsules	916114	1 piece			
■ Plastic wash bottle 500 mL with spraying attachment	91689	1 piece			
■ Magnetic stirring unit	970115	1 piece			
■ Mini-magnet for stirring (30 x 6 mm)	916211	1 piece			
■ Timer with digital display and acoustic signal (up to 99:59 min)	91696	1 piece			
■ Porcelain mortar 90 mm Ø with pestle	91688	1 piece			
■ Holder for 15 round glass tubes and 2 tubes for sample digestion	91623	1 piece			
■ Safety kit, consists of safety glasses, gloves and rubber apron	91690	1 piece			
■ Adhesive tape, glass fiber reinforced, for closing the shipping boxes for hazardous goods	91620	1 roll, 50 m			
■ Glass funnel 60 mm Ø	91681	1 piece			
■ Glass funnel 80 mm Ø	91682	1 piece			
■ Filter circles MN 1670, 11 cm Ø	470011	100 pieces			
■ Filter circles MN 640 d, 15 cm Ø	205015	100 pieces			
Membrane filtration					
■ Membrane filtration kit: 2 syringes 20 mL, 25 CHROMAFIL® membrane filters 0.45 µm	91650	1 set			
■ CHROMAFIL® membrane filters 0.45 µm	91652	50 pieces			
■ Membrane filtration kit: 2 syringes 20 mL, 25 CHROMAFIL® membrane filters 1.2 µm	916511	1 set			
■ CHROMAFIL® membrane filters 1.2 µm	916513	50 pieces			
■ Membrane filtration kit: 2 syringes 20 mL, 25 CHROMAFIL® membrane filters GF / PET 0.45 µm	91601	1 set			
■ CHROMAFIL® membrane filters GF / PET 0.45 µm	91602	50 pieces			
Pipetting					
■ Piston pipette 200 µL	91672	1 piece			
■ Plastic tips transparent for piston pipettes 5–200 µL	916915	100 pieces			
■ Piston pipette 500 µL	91653	1 piece			
■ Plastic tips transparent for piston pipettes 100–1000 µL	91676	100 pieces			
■ Piston pipette 1.0 mL	91671	1 piece			
■ Plastic tips transparent for piston pipettes 100–1000 µL	91676	100 pieces			

GHS: Globally harmonized system: This product contains harmful substances which must be specially labeled as hazardous. For detailed information please see the SDS.

Description	REF	Content	Number of tests	Shelf life	GHS
■ Piston pipette 2.0 mL	916917	1 piece

■ Digital piston pipette 100–1000 µL, adjustable, with tip ejector	91677	1 piece			
■ Plastic tips transparent for piston pipettes 100–1000 µL	91676	100 pieces			
■ Digital piston pipette 1.0–5.0 mL, adjustable, with tip ejector	916909	1 piece			
■ Plastic tips transparent for piston pipettes 1.0–5.0 mL	916916	100 pieces			
■ Pipette stand for 6 piston pipettes	91679	1 piece			
Extraction					
■ 100 mL separation funnel with NS glass tap and PE stopper for extraction methods	91664	2 pieces			
■ Stand with clamps and bosses for 4 separation funnels, height 70 cm	91695	1 piece			
AOX					
■ Supplement kit for AOX for the sensitive AOX range (0.01–0.30 mg/L AOX) and for higher COD values (required above 50 mg/L COD)	918072	2 x 4 g	20	1 year	■
■ Chloride detection kit AOX for samples with high chloride contents	918073	10 mL		1 year	■
■ Starter set for AOX, consists of tweezers, funnel, cartridge adaptor, beaker, glass rods, 1 L bottle and syringes	916111	1 set			
■ Pump set for AOX, consists of centrifugal pump, connecting tubes, graduated 1 L reservoir with tap and stand with clamps and bosses	916115	1 set			
■ NANOCOLOR® cartridge adapter for AOX pump-set	916113	1 piece			
BOD₅					
■ BOD ₅ nutrient mixture (without <i>N</i> -allylthiourea [NATU])	918994	20 cuvettes	20–80	2 years	
■ BOD ₅ nutrient mixture PLUS (with <i>N</i> -allylthiourea [NATU])	918995	20 cuvettes	20–80	2 years	
■ BOD ₅ accessories set, consists of electric air pump, 10 L PE container, 2 aerating bricks, 1 L laboratory bottle, 4 Winkler bottles	916918	1 set			
■ BOD ₅ -TT accessories set, consists of electric air pump, 2 aerating bricks, 1 L PE container, 2 reaction vessels (40 mL)	916925	1 set			
■ Reaction vessels for BOD ₅ -TT	916926	10 pieces			
■ Oxygen bottles according to Winkler (250–300 mL)	916919	4 pieces			
■ Aerating bricks for BOD ₅ determination	916920	4 pieces			
COD					
■ Chloride complexing agent for chloride concentration of 1000–7000 mg/L Cl ⁻	918911	100 mL	100	1.5 years	■
■ Cartridges for chloride elimination of up to 2000 mg/L chloride per cartridge	963911	10 pieces	10	1 year (2–8 °C)	■
■ COD- and TOC-free water	918993	50 mL		1 year	
■ Safety bottle for shaking COD tubes	91637	1 piece			
Hydrocarbons					
■ Extraction of HC from water	918571	1 box	20	1.5 years	■
■ Extraction of HC from soil	918572	1 box	20	1.5 years	■
■ Separation funnel 500 mL with PTFE tap and glass stopper	91608	2 pieces			
■ CHROMABOND® column 45 mL with 4 g aluminum oxide ALOX N for purification of water and soil extracts by solid phase extraction	730250	20 pieces	20	3 years	
■ Syringe adaptor for CHROMABOND® columns 45 mL	91603	2 pieces			
■ Plastic syringes 50 mL	91609	10 pieces

- Flexible and custom-made products
- Special filter papers for sewage plants according to DIN EN 872

Microbiological tests

BioFix®	
Nitrification inhibition tests	118
Luminous bacteria toxicity tests	120

Nitrification inhibition tests

Easy control of nitrification

The nitrification inhibition tests BioFix® A-Tox / N-Tox provide an easy method to control the biology on sewage plants. These BioFix® nitrification inhibition tests can be used to measure the inhibition of the nitrification in all types of water. Interferences by single substances as well as substance mixtures are detected.

Nitrification is an important step during waste water purification in order to keep the concentration of ammonium ions in the effluents of the sewage plant as low as possible. Additionally, nitrification is the prerequisite for denitrification for complete nitrogen elimination. This process is required for waste water treatment in many countries.

BioFix® nitrification inhibition tests allow the investigation of the first and second step of nitrification separately as well as undifferentiated. With BioFix® A-Tox one tests, whether the first step of the nitrification, the oxidation of ammonium, is inhibited by sample components. BioFix® N-Tox is used to analyze the second step of the nitrification, the oxidation of nitrite.

Whether the nitrification is inhibited by sample components in general can be determined with the undifferentiated screening test BioFix® A / N-Tox.

How it's done

Procedure of nitrification inhibition tests

Rapid

- Test only takes 10 min
- Pre-dosed nitrificants
- Ready-to-use reagents

Easy

- Considerably less effort necessary compared to DIN-procedure
- Evaluation without inconvenient equipment
- Dispose of used reagents without constraints

Safe

- High sensitivity
- Very good reproducibility due to defined bacteria strains
- Differentiated analysis of both nitrification steps possible

■ Reaction vessels	970113	50 pieces
■ Magnetic stirring unit without heater	970115	1 piece
■ Mini-magnets	970114	5 pieces
■ Stand, complete with 4 clamps and bosses	91695	1 piece

Luminous bacteria toxicity tests

Tests for bio toxicity in accordance to ISO 11348

BioFix® luminous bacteria tests use bio luminescence to determine bio toxicity. In contrast to chemical single parameter analysis, luminous bacteria tests allow an evaluation of the over-all-toxicity of a sample. The test principle is based on the static measurement of the bio luminescence of luminous bacteria (strain *Vibrio fischeri* NRRL B-11177), where a defined sample volume is mixed with a suspension of bacteria. Subsequently, the inhibition of the luminescence in the sample is determined in comparison to an uninhibited control solution.

The tests are easy to use and the procedure is normed (ISO 11348). This guarantees safe and reliable results with low effort. BioFix® luminous bacteria tests are available in various, application specific packing sizes. The applications for these tests reach from the analysis of ground, surface, seepage and all types of waste water to the analysis at waste disposal sites. Furthermore they allow the determination of the bio toxicity of solid material e.g. soil samples, sediments and solid waste.

BioFix® luminous bacteria tests are available with liquid-dried (according to ISO 11348-2) and freeze-dried bacteria (according to ISO 11348-3). Used reagents and bacteria can be disposed of easily by washing them down the drain.

The evaluation of the toxicity analysis is performed with the BioFix® Lumi-10 (see page 156), a universal luminometer, which is suitable for portable use.

NANOCOLOR® VIS II and UV/VIS II

Spectrophotometers for high-precision analysis

The NANOCOLOR® VIS II and NANOCOLOR® UV/VIS II are high-precision measurement instruments applicable in all areas of water and wastewater analysis. MACHEREY-NAGEL revolutionizes the daily laboratory work with these two new spectrophotometers, combining premium high-tech instruments with outstanding usability. With their intuitive, icon-based menu guidance, these innovative photometers can be used like a smartphone or tablet. The clearly arranged, high-resolution touch screen display makes your daily measurement routine a real pleasure.

Powerful technology

The new NANOCOLOR® spectrophotometers impress with high-class technology and optics. The spectral bandwidth of the NANOCOLOR® UV/VIS II of < 2 nm allows high-precision measurements. The optical set-up and the clever technique of both devices enable measurements without protective cover; a big advantage for smooth lab processes. With a 2D barcode scanner and cuvette recognition, all steps from measuring over displaying to storing of the result are part of a fully automated sequence.

The allrounders for all requirements

As comprehensive spectrophotometers, the NANOCOLOR® VIS II and UV/VIS II, meet all requirements of your daily laboratory work. They come with well-known barcode technology for a rapid measurement of NANOCOLOR® tube tests. In addition, they offer extensive color measurement possibilities and real-time scan recording. Next the nephelometric turbidity measurement and the turbidity measurement in transmitted light, the preprogrammed MEBAK methods allow a comprehensive brewery analysis. The simple menu navigation and the icon-based pictogram instructions for the performance of cuvette tests, reduce the complexity of the daily laboratory work. The clear result screen enables an easy assignment of additional sample information and measurement results. The systematic menu guidance for the calibration of special methods allows even inexperienced users to program methods for user specific applications.

Good to know

Turbidity – a source of error:
Turbidity is often underestimated since it is not always visually recognizable. During each measurement, the MACHEREY-NAGEL spectrophotometers automatically measure the turbidity and actively warn the user in case of an interfering turbidity.

Good to know

An overview of all NANOCOLOR® test kits available on the NANOCOLOR® UV/VIS II and VIS II is given from page 88.

How it's done

In four steps to inspection equipment monitoring

1. Call up main menu

2. Choose IQC-menu

3. Call up inspection equipment monitoring

4. Choose respective test

Good to know

The test equipment offers the monitoring of the entire analysis system and also extensive options for verifying the device functionality. The user can perform the test himself and save costs, an external device test is no longer needed.

NANOCOLOR® VIS II and UV/VIS II

Smart

- Outstanding usability due to touch screen
- 10.1" HD display for a clear overview
- Unique user experience due to icon based menu guidance

Precise

- High quality optics with reference detector technology
- Safe results due to automatic turbidity control function (NTU-check)
- Safeguarding of results via integrated IQC menu

Impressively versatile

- Future-proof interfaces
- Color measurements, turbidity measurements and scans
- Applicable in all fields of water and waste water analysis

Smart photometry

NANOCOLOR® VIS II and UV/VIS II

The next audit will be a breeze

Quality is of high importance for MACHEREY-NAGEL. Therefore, our new spectrophotometers are equipped with extensive quality control features. Besides the integrated, f.o.c. inspection equipment monitoring tools, the devices offer a variety of quality control functions for e.g. standard measurements, multiple determinations and dilution series. IQC cards are generated directly in the device and can be printed or exported for documentation purposes. Therefore, NANOCOLOR® VIS II and UV/VIS II offer easy to use control options, allowing an efficient and accurate internal quality control perfectly integrated in your daily work.

Striking interface options for smart connectivity

The connection of measuring devices to laboratory information systems (LIMS) plays a more and more important role in many industries. Therefore, the NANOCOLOR® VIS II and NANOCOLOR® UV/VIS II are equipped with all important interfaces (LAN, RS232, USB) for the connection to laboratory information systems. In addition, the integrated LIMS configurator allows a customized adaptation for many kinds of data for transfer. An easily accessible USB port increases the comfort of data exchange with mass storage media or the usage of a barcode reader, scanner or printer.

Internal quality control	With NANOCONTROL NANOCHECK 2.0 and integrated Holmium oxide filter	
Cuvette slot	Test tubes 16 mm OD Rectangular cuvettes 2 mm, 10 mm, 20 mm, 40 mm, 50 mm	
Data memory	16 GB Micro SDHC card, 5000 measured data sets, 100 scans or color measurements, GLP-conform	
Display	10.1" LED backlit HD display, anti-reflective cover glass with projected capacitive touch screen (PCAP)	
Operation	Test selection via barcode technology, icon-based menu guidance, touch screen	
Languages	DE/EN/FR/ES/PT/PL/HU/NL/CZ/RO/IT	
Interfaces	LAN, 2 x USB (Host), 1 x USB (Function) and RS232	
Update	Free of charge via USB stick	
Operating range	10 °C–40 °C, up to 80 % relative humidity (non-condensing)	
Power supply	Input: 110 V–240 V, Output: 12 V 3A	110 V–240 V, ~50/60 Hz
Dimensions	360 mm x 400 mm x 110 mm	400 mm x 440 mm x 170 mm
Weight	4.0 kg	6.5 kg
Warranty	2 years	
CE	CE certified	

NANOCOLOR® Advance

Smart into the future

The spectrophotometer *NANOCOLOR®* Advance combines the most important features of our portable compact photometer *PF-12^{Plus}* and our high-precision spectrophotometer *NANOCOLOR®* VIS II. It provides precise and reliable measurement results in the daily laboratory routine and can also be used mobile due to its rechargeable battery. With its wavelength spectrum of 340–800 nm it allows the measurement of all photometrically evaluable test kits from MACHEREY-NAGEL. The *NANOCOLOR®* Advance can therefore be used universally in the entire spectrum of water and wastewater analysis.

Leave nothing to chance

The *NANOCOLOR®* Advance offers the user an automatic detection of interfering turbidity (NTU-Check). With an additional 860 nm LED, the device determines the nephelometric turbidity during each measurement of a tube test and warns the user of incorrect results. This option helps to avoid measuring errors and sets the basis for reliable measuring results.

Experience flexibility

The *NANOCOLOR®* Advance is the first photometer from MACHEREY-NAGEL with a 24 mm cuvette slot and thus extends the options for all areas of water analysis. Besides the *NANOCOLOR®* tube tests and standard tests, the test kits from our *VISOCOLOR®* ECO and *VISOCOLOR®* Powder Pillows range can also be evaluated. The comprehensive and easy-to-understand menu for creating customer-specific methods makes the device an all-rounder in laboratory analysis and measurements on the road.

Good to know

The *NANOCOLOR®* Advance has passed the vibration test according to Military Standard 810H only 514.8 CAT 4 and fulfills the requirements of protection class IP 67. This underlines the robustness of the device and confirms its suitability for mobile analysis.

Good to know

Universal cuvette slot

10, 20, 50 mm standard tests as well as 16 and 24 mm tube tests can be used with only two adapters.

Stable and with a large opening, the new 24 mm tube tests are ideally suited for the evaluation of our *VISOCOLOR®* Powder Pillows (see page 82)

How it's done

For non-barcoded tubes your result is just four clicks away.

1. Call up Favorites

2. Choose method and press OK

3. Insert cuvette and press measure

4. Read result

Smart

- 2D barcode recognition for automatic method selection
- Touch screen and icon-based menu navigation for outstanding usability
- NTU check for detection of interfering turbidities

Mobile

- Water proof according to IP 67
- Robust design and built-in battery ensure a limitless flexibility
- Applicable in all fields of water and waste water analysis

Versatile

- High quality optics for perfect results in every environment
- Comprehensive options for a full internal quality control
- Compatible with all photometrically evaluable test kits from MACHERY-NAGEL

Smart photometry

NANOCOLOR® Advance

Versatile in use

The NANOCOLOR® Advance allows a simple and reliable routine analysis by fully automatic cell recognition via the integrated 2D barcode scanner. The fast selection of the test method and the correct wavelength allows almost contactless operation.

The data export is done directly via the integrated interfaces. Be prepared for future requirements. You do not need any additional accessories for the data export. Connect USB stick - export data - open on computer.

Photometric range	+/- 3.0 A in the range 340–800 nm
Photometric accuracy	0.003 A at 0.0–0.5 A; 1 % at 0.5–2.0 A
Photometric linearity	< 0.5 % at 0.5–2.0 A; ≤ 1 % at > 2 A with neutral glass filters at 546 nm
Scattered light:	< 0.5 %
Measurement modes	Over 200 preprogrammed tests and special methods; 100 fully programmable methods; absorbance; transmission; factor; kinetics; 2-point calibration; scan; nephelometric turbidity measurement
Compatible test kits	<i>NANOCOLOR®</i> tube tests (see page 88) <i>NANOCOLOR®</i> standard tests (see page 98) <i>NANOCOLOR® ECO</i> tests (see page 102) <i>VISOCOLOR® Powder Pillow</i> tests (see page 82) <i>VISOCOLOR® ECO</i> tests (see page 76)
Turbidity measurement	Nephelometric turbidity measurement (based on ISO 7027, 16 mm and 24 mm) 1–1000 NTU Accuracy: 1 NTU: 0–2 NTU 4 NTU: 3–5 NTU 100 NTU: 95–105 NTU 400 NTU: 380–420 NTU
Cuvette slot	Tube test 16 mm and 24 mm OD Standard test 10 mm, 20 mm, 40 mm and 50 mm
Data memory	1000 Measured values, 1000 IQC data, 100 scans; GLP-conform
Display	Backlit colored 5" display with touch screen
Operation	Barcode technology; icon-based display menu navigation; capacitive touch screen
Languages	DE / EN / FR / ES / NL / IT / HU / PL / CZ / PT-Br / TK / BG / RO / DK
External light	Insensitive; open cuvette slot
Interfaces	LAN (CAT 6; only use shielded cables with a maximum length of 20 m) 2 x USB (Host), 1 x USB (Function)
Internal quality control	With <i>NANOCONTROL</i> <i>NANOCHECK</i> 2.0 and integrated Holmium oxide filter
Protection class	IP 67
Update	Free of charge via USB stick
Operating range	10 °C–40 °C, up to 80 % relative humidity (non-condensing)
Power supply	100 V–240 V~, 50/60 Hz/6 V, 3.2 Ah via built-in battery including mains power supply
Dimensions	325 x 280 x 130 mm (L x W x H)
Weight	3.8 kg
Warranty	2 years
CE	CE certified

Compact photometer for mobile water analysis

The photometer PF-12^{Plus} is a device tailored for the mobile water analysis. The icon-based menu guidance and clear taskbar make the PF-12^{Plus} an easy to use photometer for all fields of water and wastewater analysis without the need for extensive training. The device comes in a rugged case equipped with useful accessories and is therefore particularly popular with users for the direct analysis at the point of sampling.

Easy implementation

Measurement results are obtained very quickly with the PF-12^{Plus}, thanks to its simple operation. Equipped with more than 100 preprogrammed methods, it is the ideal companion for analysis on the road. The PF-12^{Plus} comes with easy to understand pictogram instructions in a practical manual for the evaluation of VISOCOLOR[®] ECO test kits.

Free programming

In addition to the preprogrammed methods, the PF-12^{Plus} offers the possibility to create up to 50 special methods for customized applications. Equations up to 4th degree and logarithmic functions can be programmed systematically.

Turbidity measurements

With its especially positioned 860 nm LED the PF-12^{Plus} enables nephelometric turbidity measurements (NTU) in the range of 1–1000 NTU. Therefore, disturbing turbidities will be detected reliably in parallel to a measurement of tube tests - a huge PLUS on measurement safety. Furthermore, the PF-12^{Plus} offers the possibility to accurately determine the turbidity in transmitted light from 4–350 FAU.

Ordering information

Description	REF
■ Compact photometer PF-12 ^{Plus} for evaluation of VISOCOLOR [®] ECO tests, VISOCOLOR [®] Powder Pillows, NANOCOLOR [®] ECO and NANOCOLOR [®] tube tests, incl. software DVD, manual, 4 batteries, 4 empty test tubes, funnel, beaker, syringe, USB cable, calibration cuvette, cleaning cloth and certificate in rugged case	919250

Good to know

Manifold case solutions are available for the PF-12^{Plus}, which can be individually equipped with test kits. An overview of the available cases is given on page 164.

Good to know

An overview of the VISOCOLOR[®] ECO tests, VISOCOLOR[®] Powder Pillows, NANOCOLOR[®] ECO and NANOCOLOR[®] tubes compatible with the PF-12^{Plus} is given on page 76, page 82, page 102 and page 88.

Good to know

Turbidity – a source of error:
Turbidity is often underestimated since it is not always visually recognizable. During each measurement, the PF-12^{Plus} automatically measures the turbidity in the tube and warns the user in case of an interfering turbidity.

Safe

- Easy handling for precise results
- GLP-conform storage of all measurement results
- Comfortable data export and data backup options

Mobile

- Flexible power supply via batteries or accu-pack
- Backlit graphic display also for critical lighting conditions
- Robust and waterproof according to IP 68

Versatile

- Compatible with *NANOCOLOR*[®] and *VISOCOLOR*[®] test kits
- NTU-measurement and NTU-check for detection of interfering turbidities
- Applicable in all fields of water and waste water analysis

**Technical data**

PF-12 ^{Plus}	
Type	Filter photometer with microprocessor control, self-test and auto-calibration
Optics	Automatic filter wheel with 7 interference filters; Insensitive to external light for fast measurements without cuvette slot cover
Wavelengths	345 nm / 436 nm / 470 nm / 540 nm / 585 nm / 620 nm / 690 nm plus 1 compartment for an additional filter; 860 nm LED for NTU measurement
Wavelength accuracy	± 2 nm, bandwidth at half transmission 10 nm–12 nm
Light source	Xenon lamp
Detector	Silicon-photodiode
Blank value	Automatic
Measuring modes	Over 100 preprogrammed tests and special methods, absorbance, transmission, factor, standard, nephelometric turbidity measurement, 50 freely programmable methods
Turbidity measurement	Nephelometric turbidity measurement (based on ISO 7027, 16 mm) 1–1000 NTU Accuracy: 1 NTU: 0–1 NTU, 4 NTU: 3–5 NTU, 100 NTU: 90–110 NTU, 400 NTU: 360–440 NT
Compatible test kits	<i>VISOCOLOR</i> [®] ECO tests (see page 76), <i>VISOCOLOR</i> [®] Powder Pillow tests (see page 82), <i>NANOCOLOR</i> [®] ECO tests (see page 102), <i>NANOCOLOR</i> [®] tube tests (see page 88)
Photometric range	± 3 A
Photometric accuracy	± 1 %
Stability	< 0.002 A/h
Cuvette slot	Tubes 16 mm OD
Data memory	1000 results, GLP conform
Display	Backlit graphic display, 128 x 64 pixels. All important data at a glance: Result with unit, date, time, sample number, sample location, dilution, measuring range control bar
Auto-off function	Inactive or automatic shutdown after 5 min, 10 min, 15 min, 20 min, 60 min
Quality control	With <i>NANOCONTROL</i> NANOCHECK 2.0
Operation	Self-explanatory menu guidance, foil keypad, test selection via parameter lists
Interface	USB 2.0
Languages	DE / EN / FR / ES / IT / NL / HU / PL / PT / CZ / ID / SL / TR / MY
Update	Free of charge via Internet / PC
Operating range	10 °C–40 °C, up to 80 % relative humidity (non-condensing)
Power supply	4 AA batteries, rechargeable batteries, USB interface; optional internal accu-pack
Housing	Shock-resistant according to MIL-STD 810C (test specification 514.2); Waterproof and dustproof according to IP 68
Dimensions	215 mm x 100 mm x 65 mm
Weight	0.7 kg
Warranty	2 years
CE	CE certified

Compact photometer for mobile water analysis

The compact photometer PF-3 is the smallest member of the MACHEREY-NAGEL photometer family. The device completes our product portfolio and perfectly fits our tradition of reliability, user friendliness and innovation. The instrument comes in multiple versions, equipped with three LEDs and interference filters, designed to meet the analysis requirements of specific applications. Together with the approved *VISOCOLOR® ECO* test kits, *VISOCOLOR® Powder Pillows* and high quality *NANOCOLOR®* tube tests from MACHEREY-NAGEL, the PF-3 is perfectly suited for mobile analysis directly at the place of sampling. Optionally, the device comes in a practical case with pre-equipped test kits, in a cardboard box or in an empty case for the individual combination with our *VISOCOLOR® ECO* test kits.

Small, strong, smart

The handy and compact design makes this lightweight the ideal companion for mobile analysis. Its simple operation allows measurements within seconds. Besides the measurement accuracy, simplicity and user friendliness are key features of all MACHEREY-NAGEL devices. The interaction of context-sensitive icons and only four buttons guarantees a smart, clear and language-independent operation.

Fast and reliable results

The centerpiece of the PF-3 is its high-quality optic with the specially selected LEDs and corresponding interference filters. The unique "open slot" technology allows measurements without cuvette slot cover, thus emphasizing the high technical standard of the instrument. This yields into a simple and quick operation for the user, together with highly reliable results. MACHEREY-NAGEL provides free PC software, for an even more comfortable operation. The software makes data management convenient, simple and efficient. Additionally it guarantees a forgery-proof data management.

Be prepared

The variable power supply is of particular convenience for the user and enables reliable measurements in all situations. Besides batteries and an accu-pack, the device can also be powered directly via an USB cable or a power adaptor.

Good to know

Manifold case solutions are available for the PF-3, which can be individually equipped with test kits. An overview of the available cases is given on page 164.

Good to know

An overview of *VISOCOLOR® ECO* tests, *VISOCOLOR® Powder Pillows* and *NANOCOLOR®* tube tests compatible with the PF-3 is given on page 76, page 82 and page 88.

How it's done

Photometric determination with the PF-3

Simple

- Intuitive operation with only four keys
- Flat menu structure
- Bright display for safe readings

Robust

- Glass fiber reinforced housing for extreme durability
- Water- and dustproof according to IP 68
- Shock-resistant optics

Flexible

- Various case solutions including reagents
- Additional parameters available f.o.c.
- Compatible with *VISOCOLOR® ECO* tests, *VISOCOLOR® Powder Pillows* and *NANOCOLOR®* tests

NANOCOLOR® TIC-Ex

Removal of inorganic carbon in TOC analysis

The NANOCOLOR® TIC-Ex is required during the sample preparation of MACHEREY-NAGEL TOC tube tests. For evaluation of the total organic carbon (TOC) prior to determination, the inorganic carbon needs to be removed from the sample. The removal is accomplished by purging of air with the help of the NANOCOLOR® TIC-Ex through the prepared sample solution.

The acidified sample solutions are put into the cuvette holder and placed in the premarked positions of the NANOCOLOR® TIC-Ex. The preinstalled pipette tips are dipped into the sample solutions by pressing down the lowering mechanism of the NANOCOLOR® TIC-Ex. After switching on the device, air is automatically purged through the sample solutions in the cuvettes for five minutes. Hereby the inorganic carbon is removed as carbon dioxide quantitatively. After the elapsed time the process stops automatically. The pipette tips are removed from the solutions and can be disposed using the removing mechanism on top. Afterwards the sample solutions are treated following the next steps of the respective TOC test kit.

Good to know

The NANOCOLOR® TIC-Ex can be used even for very hard waters with up to 48° d and therefore is superior to other methods for TIC removal. To check the carbonate hardness of your samples, we recommend QUANTOFIX® carbonate hardness (REF 91323).

Ordering information

 NANOCOLOR® TIC-Ex Device for removal of TIC, incl. cuvette holder, manual, mains adapter and certificate in a cardboard box	916993

Technical data

TIC-Ex	
Type	Device for removal of TIC
Operation	Via two buttons
Operating range	5–40 °C, 20–80 % relative humidity (non-condensing)
Power supply	9 V DC / 2.0 A
Dimensions	350 x 300 x 235 mm
Weight	4.95 kg
Warranty	2 years
CE	CE certified

NANOCOLOR® Sipper module

Dealing with large sample numbers in photometric analysis often requires a lot of time and resources due to the preparation of the samples in different cuvettes and the frequent changes of the cell in the photometer. The sipper module **NANOCOLOR® FP-200** is an optional accessory for the spectrophotometers **NANOCOLOR® VIS II** and **UV/VIS II**, which can significantly reduce the analysis effort for high sample quantities. A constant amount of liquid is pumped through a flow cell (2 mm, 10 mm or 50 mm) in the photometer and the absorbance is measured automatically. As the same optical conditions apply to both the zero measurement and the measurement of the sample, the measuring accuracy can be improved by working with the **NANOCOLOR® FP-200**.

Good to know

Using the sipper module, the danger of direct contact with chemicals is drastically reduced. A recasting of samples into the cuvettes is no longer necessary.

Ordering information

Description	REF
■ Sipper module NANOCOLOR® FP-200 for NANOCOLOR® UV/VIS II and NANOCOLOR® VIS II incl. manual, USB cable, tygon-tubing set with adapters, intake needle and certificate	919180

Technical data

FP-200	
Type	Peristaltic pump
Operation	Fully automatic using the spectrophotometers NANOCOLOR® VIS II and UV/VIS II
Housing	Protection rating IP 30
Interfaces	USB B
Additional information	Wavelength range - 340 nm–900 nm (plastic), 190 nm–900 nm (quartz glass)
Pumping capacity	1 mL/s
Power supply	Via USB cable, 5 V, 500 mA
Operating range	10–40 °C max. 80 % relative humidity (non-condensing)
Dimensions	125 x 177 x 69 mm
Weight	365 g
Warranty	2 years
CE certified	Yes

NANOCONTROL

Analytical quality control for the entire analysis system

The **NANOCONTROL** equipment for quality control of the photometers is designed to support our IQC concept. It always allows the user to check the correct functionality of the devices and therefore represents a cornerstone for ensuring correct measurement results.

Checking the photometric accuracy

NANOCONTROL NANOCHECK 2.0 is used as secondary standard for the determination of photometric accuracy and linearity. It is a crucial tool for the inspection of spectrophotometers and filter photometers, besides the use of standards and spiking solutions. Two different colored solutions are included in three concentrations each. They are factory-checked against a reference spectrophotometer. The absorbances of these NIST-traceable control solutions are reported in a comprehensive certificate. The automated linearity check in our spectrophotometers **NANOCOLOR® VIS II**, **NANOCOLOR® UV/VIS II** and **NANOCOLOR® Advance** provides an additional, unique level of safety. A 2D-Barcode on each box is used to comfortably program our spectrophotometers with the LOT-specific data. Besides the check of the photometric accuracy **NANOCOLOR® VIS II** and **NANOCOLOR® UV/VIS II** also support an automatic photometric linearity check when using **NANOCONTROL NANOCHECK 2.0**.

All features of **NANOCONTROL NANOCHECK** combined make photometer inspection easy as never before.

Checking the turbidity calibration

NANOCONTROL NANOTURB is a turbidity standard for nephelometric turbidity measurements for our photometers. The solutions are used as a primary standard for calibrating and checking the nephelometric turbidity unit in accordance with ISO 7027. The test solutions are ready for immediate use and must only be placed into the photometer. Dilution steps or contact with chemicals are avoided effectively.

Good to know

With the **NANOCONTROL NANOCHECK 2.0** evaluation sheet the requirements for quality assurance can be fulfilled and it serves as validation against authorities and supervisors.

The complete analytics from a single source

MACHEREY-NAGEL photometers fulfill all requirements for daily laboratory analysis. In addition, many accessories are available to be equipped optimally for special applications. The sipper module *NANOCOLOR*[®] FP-200 for instance enables timesavings and increased accuracy for standard tests with high sample throughput. The user receives all accessories from a single source ensuring compatibility with the different photometers at all times.

²⁾ Required additionally: Mains adaptor, REF 91906
³⁾ Required additionally for PF-3: Mini USB-cable, REF 919390

NANOCOLOR® VARIO 4, VARIO C2 and VARIO C2 M

Heating blocks for reliable digestions

The NANOCOLOR® heating blocks enable a fast and safe performance of all kinds of sample digestions required in water and waste water analysis. Standard parameters for routine digestions such as COD, TOC, total nitrogen, total phosphorus and metals are pre-programmed in the heating blocks and help the user to avoid mistakes.

The small one and the big one

The heating block NANOCOLOR® VARIO C2 enables the simultaneous digestion of up to 12 samples. For a higher sample throughput the NANOCOLOR® VARIO 4 is perfectly suited, as it allows up to 24 simultaneous digestions in two separately controllable heating units. Therefore, MACHEREY-NAGEL offers the appropriate heating block to each user for routine analysis in the laboratory. The NANOCOLOR® heating blocks are equipped with lockable protective lids and a touch protection for increased work safety. The NANOCOLOR® VARIO C2 M heating block with two 22 mm and eight 16 mm holes is available for the digestion of large sample volumes as part of metal analysis.

Extremely versatile and maximally secure

In addition to the preprogrammed temperatures and heating times, a large number of user-specific digestion methods can be stored. The USB and RS232 interfaces allow an easy connection to a PC and enable the convenient linkage to the NANOCONTROL inspection equipment monitoring tools. The graphical representation of the heating curves enhances transparency about the temperature stability. The electronic over-temperature sensor protects the heating block from overheating.

Temperature testing and calibration

A temperature test can be performed using the NANOCOLOR® T-Sets to safeguard results against authorities and supervisors. The free PC software of the heating blocks facilitates checking of temperatures and the creation of the respective reports. After measurement data transfer via the interfaces using the PC software, the testing certificate is created directly, which ensures a GLP-compliant documentation of all equipment testing.

Suitable for all NANOCOLOR® digestion methods

Application	Temperature	Time
COD according to DIN ISO 15705	148 °C	120 min
High-speed COD	160 °C	30 min
TOC	100 °C	60 min
Total nitrogen	120 °C	30 min
Total kjeldahl nitrogen	120 °C	30 min
Total phosphorus	120 °C	30 min
Organic acids	100 °C	10 min
Total metals	120 °C	30 min
AOX	120 °C	30 min
Hydrocarbons	148 °C	120 min
Programmable, user-defined programs	40 °C–160 °C	0 h:01 min–9 h:59 min

Good to know

The NANOCOLOR® USB T-Set is a simple and unique tool for inspection equipment monitoring of MACHEREY-NAGEL heating blocks by the user himself. For further information about the NANOCOLOR® USB T-Set see page 150.

NANOCOLOR® VARIO 4, VARIO C2 and VARIO C2 M

Easy

- User-friendly touch screen
- Intuitive usage via icons
- Operation without the need for intensive training

Fast

- All important parameters within 30 minutes
- Extremely short heating-up times
- Call up of heating programs in a matter of seconds

Secure

- High temperature stability
- Graphically visualized heating curves
- Internal quality control via NANOCOLOR® T-Set

Compact heating block for mobile analysis

Sample digestion is an essential step in the determination of a couple of important parameters in photometric water analysis, but is usually only carried out in a laboratory. The new **NANOCOLOR® VARIO Mini** now gives the ability to perform sample digestions on-site or on the road. This guarantees a mobile and safe performance of all sample digestions required in the water and waste water analysis. The compact size and the flexible power supply, e.g. through the power port of a car, ease the use and offer a maximum flexibility for the everyday analysis.

Simply clever

The **NANOCOLOR® VARIO Mini** has six positions for test tubes with an outer diameter of 16 mm and therefore offers the opportunity to examine small numbers of samples directly on the spot. Furthermore, the device impresses with a temperature stability of $\pm 1\text{ }^{\circ}\text{C}$. All digestions of the MACHEREY-NAGEL test kits can easily be conducted using the pre-programmed temperatures and heating times. With the **NANOCOLOR®** USB T-Set MACHEREY-NAGEL offers a reliable inspection equipment monitoring tool to ensure the temperature stability and the accuracy of the temperature calibration of the **NANOCOLOR® VARIO Mini**. It allows the easy temperature checking and calibration of the heating block and thereby results in an always accurate and reliable digestion of the sample.

Display	Graphic display 128 x 64 pixel
Operation	Icon-based menu guidance with four buttons
Temperatures	70 °C, 100 °C, 120 °C, 148 °C, 150 °C, 160 °C
Temperature stability	$\pm 1\text{ }^{\circ}\text{C}$ (according DIN, EN, ISO and EPA methods)
Warm-up time	From 20 °C to 160 °C within 25 minutes (at 20 °C ambient temperature)
Heating times	30 min, 60 min, 120 min
Safety	Safety cover with lockable protective lid and overheating protection
Interfaces	Mini-USB-OTG (On-The-Go)
Internal quality control (IQC)	With NANOCOLOR® USB T-Set (REF 919921) Optional fully automatic calibration and test certificate generation
Update	Free via Internet / PC and USB stick
Operating range	10 °C–40 °C; max. 80 % relative humidity (non-condensing)
Power supply	12 V, 5 A
Power consumption	60 W
Dimensions	105 mm x 125 mm x 170 mm
Weight	670 g
Warranty	2 years
CE	CE certified

Good to know

No power supply available? The **NANOCOLOR® VARIO Mini** can be operated with an external battery or the power port of a car as the only heating block device of its class. For the comfortable transport MACHEREY-NAGEL provides compact and complete mini laboratories as case solutions for direct analysis at the place of sampling.

NANOCOLOR® VARIO HC

Heating block for fast digestions

The factor time plays a crucial role in many laboratories when conducting sample digestions. The NANOCOLOR® VARIO HC enables the user to digest all important parameters in just 30 minutes. The usually very slow cooling down of the cuvettes after digestion is greatly accelerated in the NANOCOLOR® VARIO HC by the active cooling unit. Hereby the test tubes are ready for the measurement or further analysis steps shortly after the digestion has ended.

Simply fast

Thanks to the intelligent linkage of heating-up, digestion and cooling-down the NANOCOLOR® VARIO HC allows the performance of a COD test in less than 45 minutes. The readily prepared cuvettes are directly inserted into the cold heating block, which means an additional time saving for the user as the waiting of the heating process is omitted.

Approved and versatile

In addition to the cooling function, the NANOCOLOR® VARIO HC comes with all features provided by our proven heating blocks NANOCOLOR® VARIO 4 and VARIO C2. Naturally, this includes the possibility of checking and calibrating the temperature with the NANOCOLOR® T-Sets, thus fulfilling the requirements of analytical quality control. The safety of the user is as important as accurate results. The protection lid of the NANOCOLOR® VARIO HC locks electronically during digestion. The operation of the heating block and the input of digestion programs are carried out via a user-friendly touch screen.

Good to know

Both, the temperature of the cooling process as well as the ventilation speed can be individually adjusted by the user.

NANOCOLOR® T-Set and USB T-Set

Analytical quality control for the entire analysis system

The unique inspection equipment NANOCOLOR® T-Set is an electronic temperature sensor, which is suitable for the temperature control and automatic calibration of all NANOCOLOR® heating blocks. The user can check the heating blocks independently with the NANOCOLOR® T-Set for internal quality control purposes. For this reason the NANOCOLOR® T-Set is an important building block for a comprehensive analytical quality assurance.

Independent self-control

By a target-actual comparison, the temperatures in the heating blocks can be tested quickly and easily. All programmed temperatures are measured, registered and stored in the heating block by the NANOCOLOR® T-Set. This tool also enables an automatic calibration of the heating blocks. Our customers appreciate the NANOCOLOR® T-Set, as it allows a cost-effective and independent monitoring of their own heating block.

Data transfer and documentation

After completion of the temperature control or calibration, the collected data can be transferred to a computer easily via the RS232 or USB port. The free of charge NANOCOLOR® T-Set PC software enables a GLP-compliant documentation and the creation of direct test certificates.

Now with temperature display

The new NANOCOLOR® USB T-Set is a advancement of the established NANOCOLOR® T-Set, extended by a LED display to control the measured temperature. Therefore, temperature measurements can now be carried out independent of the heating block.

Good to know

The NANOCOLOR® T-Sets can be used also for external temperature measurements, e.g. for the determination of the sample temperature.

Good to know

The temperature display of the NANOCOLOR® USB T-Set can be flipped by tapping on the edge of the device. Therefore, an optimal reading is always guaranteed.

Accessories for heating blocks

The complete analytics from a single source

MACHEREY-NAGEL heating blocks represent an important corner stone of the NANOCOLOR® analytical system. By the perfect combination of test kits, heating blocks and photometers, the user is well equipped for daily laboratory analysis. In addition to the digestion for the classical parameters such as COD and phosphate, some customers require special solutions, e.g. for the digestion of metals using *NanOx Metal*. The accessories required for this purpose are available as a complete package from MACHEREY-NAGEL. For an overview of available digestion reagents see page 110. All this ensures the compatibility of the equipment and a reliable analysis.

Good to know

The NANOCOLOR® VARIO Mini can be operated independent of the grid with a car adapter cable (REF 919938) from our heating block accessories.

NANOCOLOR® COD test kits

Safe, safer, the safest

Reliable COD analysis

- No risk of leaking gases
- Minimum quantity of hazardous chemicals
- Hg-free version available
- 13 measurement ranges available for all requirements and demands

QUANTOFIX® Relax

Reflectometer for evaluation of test strips

The QUANTOFIX® Relax is the ideal device for the objective evaluation of our QUANTOFIX® test strips. It combines the simplicity of test strips with the safety of instrumental analysis and thus the best out of these two worlds. The QUANTOFIX® Relax does not require any special strips, but evaluates the normal pH-Fix and QUANTOFIX® test strips. Therefore entrance into instrumental analysis is very simple; the same strip can be used for visual and instrumental evaluation.

Excellent usability

All functions of the device can be selected with the touch screen display. Therefore, the operation is simple and intuitive, without the need for extensive training. The auto-start function initiates the measurement as soon as the test strip is placed on the strip holder. Therefore, it is not necessary to touch the device for performing a measurement. Contaminations are reliably avoided. Frequently used parameters can be stored as favorites. Simple tapping can quickly access these favorites during operation.

Quantitative results

The optics of the QUANTOFIX® Relax has been proven for years in medical technology and supplies secure and standardized values. Thereby an accuracy of $\leq 10\%$ is achieved for many parameters; a hardly achieved level in the analysis of test strips, yet. The evaluation with the QUANTOFIX® Relax is not interfered by external factors and is therefore absolutely objective and precise. The estimation of measured values between the gradations of the scale is omitted.

Documentation and data transfer

The QUANTOFIX® Relax allows the assured documentation of analytics with test strips. Results are printed immediately after the measurement. The printout can be e.g. appended to a production protocol or kept for later quality controls. The transmission to an information system can be realized easily. In addition, the data are stored in the device and can be simply read out or printed again later on.

Good to know

For an overview of all the parameters and pH-Fix test strips available on the QUANTOFIX® Relax, please refer to page 52 and 60.

BioFix® Lumi-10

Compact luminometer for mobile use

The BioFix® Lumi-10 is a compact luminometer for the measurement of bio and chemical luminescence reactions with constant light emission. Due to its size it is ideally suited for the use in the laboratory or on the road and can be operated with a power supply as well as rechargeable batteries.

Incredibly versatile

Thanks to its highly sensitive detector (Ultra-Fast Single Photon Counter) the BioFix® Lumi-10 can be used for a variety of applications. This includes amongst others bio toxicity tests, ATP- and biomass determinations, reporter-gene assays, luminescence immunoassays as well as NAD(P)H measurements.

Individually programmable

The BioFix® Lumi-10 has six individually adjustable measurement protocols and a data memory for up to 2000 results. It provides the opportunity for single, multiple and extensive screening measurements. The results are optionally displayed in % inhibition, % stimulation or RLU (relative light units). The user can set the particular measurement parameters such as incubation time or measurement time individually. By a previous definition of detection limits, the results can be automatically classified by the device. There are already pre-programmed test methods available for the determination of luminescent bacteria toxicity tests and ATP tests.

Good to know

Thanks to six individually adjustable measurement protocols, the BioFix® Lumi-10 is extremely versatile and suitable for many applications.

Reagent cases for special applications

Compact laboratories for mobile analysis

MACHEREY-NAGEL reagent cases are flexible tools for all areas of water and soil analysis. Catering to our customer needs, we offer a large number of prepacked reagent cases with and without photometer which can be used for a wide area of applications. The rugged cases with premium foam inlays allow a fast and direct analysis at the point of interest. All needed test instructions as well as analytical accessories are already included for especially easy and convenient handling. Particular chemical knowledge or experience is not required to run any of the tests or to use the cases effectively. The color-coded bottles prevent a mixing-up of the reagents.

Consumed reagents can be replaced simple and cost-effective with refill packs.

Reagent cases for water analysis

The reagent cases together with the **VISOCOLOR®** tests give water attendants, fish farmers and other persons that are interested in water analysis the possibility to determine important analytical values for evaluation of water quality within a short time. The prepacked reagent cases can be used for a wide area of applications like swimming pools, drinking water analysis, schools, monitoring of fishing waters and of course for general water analysis.

Good to know

The **VISOCOLOR®** School reagent case is especially designed for schools. All reagents are approved to be used in schools in Germany (GUV-SR 2004 directive).

Reagent cases for special applications

Reagent cases for soil analysis

Thorough analysis is the basis to support and maintain healthy, productive and biologically active soil. To effectively and efficiently plan all measures that affect the soil (fertilization, liming, etc.) it is crucial to determine the important soil parameters first.

The VISOCOLOR® reagent cases for soil analysis are the perfect companions for economical, fast and convenient soil analysis, both in the field or in the laboratory. The user can choose between a reagent case version with or without compact photometer PF-3 Soil, which was especially developed for soil analysis.

Both case versions contain additional analytical tools, such as scale, sieve, etc. as well as predosed solutions for the production of necessary soil extracts.

Good to know

The reagent cases VISOCOLOR® School, VISOCOLOR® Fish and the VISOCOLOR® reagent case for soil analysis contain detailed manuals. Besides further background information about the most important parameters also information about reaction equations and of the reaction basis are included.

Reagent cases for individual solutions

Compact laboratories for mobile analysis

With our reagent case program we also fulfill individual customer requests. The user can choose between reagent case versions with tests for visual evaluation and possible combinations with the compact photometers PF-3 and PF-12^{Plus}.

The reagent cases for individual solutions offer a flexible combination of all VISOCOLOR® tests, pH-indicator papers, pH-Fix indicator strips, qualitative test papers and semi-quantitative QUANTOFIX® test strips as well as useful accessories.

The NANOCOLOR® reagent cases can also be equipped with NANOCOLOR® tube tests and the heating blocks NANOCOLOR® VARIO C2, NANOCOLOR® VARIO C2 M and NANOCOLOR® VARIO Mini.

Therefore, the reagent cases for individual solutions are versatily applicable in a variety of areas in water and waste water analysis.

Good to know

Starting at a minimum quantity of 50 cases, we offer entirely individual solutions in different sizes with a foam inlay designed exactly to the customers specifications and needs.

Good to know

For questions about individual solution of the reagent cases, we are pleased to be of service.

Accessories for reagent cases

The complete analysis from one source

The MACHEREY-NAGEL reagent cases are perfectly suited for mobile analysis. With our wide range of accessories they can be refilled quickly and easily.

Good to know

For general accessories for the VISOCOLOR® reagent cases see page 84

NANOCOLOR® Reagent case

Mobile analysis for sewage plants

Mobile photometric analysis

- Compact photometer PF-12^{Plus} for flexible analysis
- Heating block NANOCOLOR® VARIO C2 for fast sample digestions
- Highest transport safety due to robust case
- Tube tests for precise results
