CHROMAFIL® – Disposable filters from MACHEREY-NAGEL	31

FilterFinder online

The cross reference for syringe filters
www.mn-net.com/filterfinder

Introduction

CHROMAFIL® – Ideal for GC, HPLC and UHPLC sample filtration

By using CHROMAFIL® syringe filters unwanted particles are removed which can otherwise cause contamination and clogging of sensitive instrumentation. So, filtering your samples leads to an increase of lifetime and less downtime of chromatographic columns and equipment, gives more consistent and reproducible results and thereby saves time and money.

Features

- Different membrane types to meet multiple filtration needs
- Low content of extractable compounds
- Fast flow geometry for easy filtration
- Low hold-up volume for maximum filtrate recovery
- HPLC certified
- Designed to be compatible for the use on all common automated filtration systems, e.g., SOTAX® dissolution systems

Your benefits when using CHROMAFIL® syringe filters

- Protection of sensitive instrumentation
- Less system downtime and increased column lifetime
- Reproducible and reliable analytical results

CHROMAFIL® Xtra

Labeled for method validation and certification

- Xtra imprint for the direct identification of the membrane type, diameter and pore size
- Xtra low bleeding PP housing
- Xtra color-free plain polypropylene

Technical information

- Low content of extractable substances due to a high density polypropylene housing combined with ultrapure filtration membranes.

In comparison to filters made of polycarbonate, polyacrylate or polystyrene, all CHROMAFIL® housings are resistant to nearly all organic solvents. (see list of chemical compatibility on page 15)

HPLC test

Conditions	2 mL of the solvent (specified on top of the chromatograms) were applied to the filter; 100 µL of the filtrate were injected into the HPLC
Eluent A	water
Eluent B	acetonitrile
Gradient	10% → 95% B in 25 minutes
Flow rate	0.5 mL/min
Sensitivity	-5 to 10 mAU at 254 nm
Column	125/4 NUCLEODUR® C ₁₈ Gravity 5 µm (REF 760100.40)

Acetonitrile:

Eluate:

Blank:

Technical information

Low Bleeding PP housing

Even a treatment with very aggressive solvents / reagents does not lead to significant blind values or extractables.

For proof a filter was rinsed with 0.5 mL MSTFA (*N*-methyl-*N*-trimethylsilyl-trifluoroacetamide), a very powerful silylation reagent. The result is shown in the GC/MS chromatogram.

Technical information

Lowest content of extractable substances

- The housing of every CHROMAFIL® filter is ultrasonically sealed.
- The filters are welded, not glued, because glue may have extractable ingredients.
- The welding leads to a tight connection between both parts, thus the filter can be used in both directions. No fluid can leak from the filter housing.

The special thick rim of the housing is ideal for use in laboratory robots (e.g., SOTAX®, Benchmate™, ...).

Luer connection

Luer lock on inlet

- For a safe connection on the “high pressure” side every CHROMAFIL® filter provides a Luer lock on inlet.

Luer outlet

- For the 3, 13 and 25 mm diameter filters: standard Luer outlet. This Luer configuration offers low hold-up volume and easy filtration into autosampler vials and NMR tubes.

Filter inlet and filter outlet can be fitted to all CHROMABOND® columns and accessories for selective sample preparation with the aid of a special adaptor.

Technical information

No breakage of the membrane

- Stabilizing “crash” plate
- The sample fluid is deviated in four lanes by the “crash” plate and does not directly hit the membrane. The resulting pressure distribution protects the membrane against breakage.

Optimal flow geometry

- By star-shaped distribution plate
- The fluid penetrates the membrane on the whole surface, not only on a small area; the filter will not clog rapidly, which guarantees a high flow efficiency.

Different pore sizes

- For multiple filtration application
- Available pore sizes 0.2 and 0.45 μm (additional: PET filters with 1.2 μm , glass fiber filters with 1 μm , PES filters with 5 μm). Filters with 0.45 μm pore size remove fine particles which can clog chromatography columns. 0.2 μm pore size filters are recommended for the filtration of UHPLC samples.

Combi filters

- For solutions with a high load of particulate matter

Quality control

Pressure stability of CHROMAFIL®

The syringe filter housing is stable up to 12 bar. The “blue” test - membrane, pressure and filtration batch test - with blue colored silica particles in matching particle sizes provides an excellent method to find leaks or membrane deviations.

Packages and membranes

Package sizes

- Packs of 100 or 400 (BIGboxes) for 25 mm Ø filter
- Packs of 100 for 13 mm Ø filter
- Packs of 100 for 3 mm Ø filter
- Packs of 50 for sterile filter

Different membrane materials

Depending on your filtration task you can choose filter membranes made from different materials:

Polyester	(PET) with or without glass fiber prefilter*
Regenerated cellulose	(RC) with or without glass fiber prefilter*
Polytetrafluoroethylene	(PTFE) with or without glass fiber prefilter*
Hydrophilized Polytetrafluoroethylene	(H-PTFE)
Cellulose mixed esters	(MV)
Cellulose acetate	(CA) sterile and non-sterile
Polyamide / Nylon	(PA) with or without glass fiber prefilter*
Polyethersulfone	(PES)
Polyvinylidene difluoride	(PVDF) with or without glass fiber prefilter*
Glass fiber	(GF)

* Filters with (nom. 1 µm) GF prefilter provide a 2-4 times greater throughput than filters without prefilter for extremely viscous and most difficult-to-filter samples

Packages and membranes

Combi syringe filters

Benefits

- A coarse glass fiber (GF) prefilter and a small-pore membrane as main filter
- For solutions with a high load of particulate matter: lower back pressure, easy filtration
- For high yields of filtrate: more mL of pure filtrate per filter

The technology

The glass fiber membrane (1 μm) removes coarse particles, before they can block the fine main membrane. This results in a better filtration efficiency, particularly for highly contaminated samples.

Housing	solvent-resistant, ultra low bleed polypropylene
Inlet	Luer lock
Outlet	Luer
Pore diameter	1.0/0.20 μm or 1.0/0.45 μm
Filter diameter	25 mm
Void volume	< 80 μL
Packing unit	100 filters / BIGboxes with 400 filters

Available membranes with GF-prefilter

- Polyester (PET)
- Regenerated cellulose (RC)
- Polyvinylidene difluoride (PVDF)
- Polytetrafluoroethylene (PTFE)
- Polyamide / Nylon (PA)

Material
Membranes

MV = cellulose mixed esters

CA = cellulose acetate

RC = regenerated cellulose

PA = polyamide

PTFE = polytetrafluoroethylene

H-PTFE = hydrophilized polytetrafluoroethylene

PVDF = polyvinylidene difluoride

PES = polyethersulfone

PET = polyester

GF = glass fiber

IC = special filter for ion chromatography

Housing material

PP = polypropylene

Optimal use of CHROMAFIL®

For achieving the full benefits of filtration we recommend the following instructions.

Draw up the sample into the syringe. Then draw approximately 1 mL of air into the syringe. The air helps to minimize the remaining fluid in the filter.

Plug the CHROMAFIL® syringe filter onto the syringe with the Luer connection. Ensure a tight connection by turning gently.

Start with gentle pressure to filter your sample into a vial*. This helps to assure maximum throughput.

Tips / additional information

We recommend either discarding the first 1 mL or rinsing the filter unit with 1 mL of primary solvent before sample filtration.

In order to avoid the breakage of the membrane only syringes with volumes of 10 mL or higher should be used.

Do not reuse syringe filters

Do not use at temperatures above 55 °C (131°F)

Warning: CHROMAFIL® syringe filters are intended for laboratory use only. Do not use CHROMAFIL® syringe filters for direct patient care applications.

* MACHEREY-NAGEL offers a wide range of vials and caps. More information at www.mn-net.com/vials

How to select the optimal CHROMAFIL® syringe filter

1. Filter size

3. Membrane type

Properties of sample	Recommended	Alternatives
Aqueous, polar hydrophilic low particle-load high particle-load, prefiltration required	PET GF/PET	H-PTFE, MV, RC GF/RC, GF/PVDF
Mid-polar e.g. HPLC eluents low particle-load high particle-load, prefiltration required	PET GF/PET	PA, RC GF/PA
Proteins low binding capacity of proteins high binding capacity of proteins	CA GF	PVDF, PES GF/PVDF, GF/PET
Strong acids and bases low particle-load high particle-load, prefiltration required	H-PTFE GF/PTFE	PTFE GF
Organic, nonpolar, hydrophob low particle-load high particle-load, prefiltration required	PTFE GF/PTFE	PET GF/PET, GF/PVDF
Aqueous, for ion chromatography determinations	IC	

2. Pore size of filter membrane

Ordering information

Polyester (PET)

- Hydrophilic multipurpose membrane
- For polar as well as nonpolar solvents
- The HPLC filter, especially suited for mixtures of water and organic solvents for TOC / DOC determination, not cytotoxic, does not inhibit the growth of microorganisms and higher cells
- PET filters with integrated glass fiber prefilter* (GF / PET) are recommended for solutions with a high load of particulate matter or for highly viscous solutions

* Glass fiber exhibits a high protein-binding capacity.

Ordering information

Regenerated cellulose (RC)

- Hydrophilic membrane with very low adsorption
- For aqueous and organic / aqueous liquids, i.e. polar and medium polar sample solutions
- Binding capacity for proteins 84 µg per 25 mm filter
- RC filters with integrated glass fiber prefilter* (GF / RC) are recommended for solutions with a high load of particulate matter or for highly viscous solutions

* Glass fiber exhibits a high protein-binding capacity.

Ordering information

Polytetrafluoroethylene (PTFE)

- Hydrophobic membrane
- For nonpolar liquids and gases
- Very resistant to all kinds of solvents as well as acids and bases; flushing with alcohol, followed by water, makes the originally hydrophobic membrane more hydrophilic
- PTFE filters with integrated glass fiber prefilter* (GF / PTFE) are recommended for solutions with a high load of particulate matter or for highly viscous solutions

MULTI 96 filter plates

- 96-well polypropylene plates for the simultaneous filtration of 96 samples
- Advantages of this high-throughput system:
 - Economical by saving time and solvent
 - Use of multi-channel pipettors facilitates liquid transfer steps
 - Readily adaptable to all common automated/robotic handling systems
 - Minimized dead volume (= 40 µL)
- Membrane materials correspond to the respective CHROMAFIL® syringe filters
